

# VS511SZ Tech Sheet

## Balboa Instruments System PN 54384-04

System Model # VSP-VS511SZ-DCAH

Software Version # 43

EPN # 2765

Base PCBA - PN 54385-03

PCB VS500Z - PN 22972 Rev D

### Base Panels

VL600S – PN 54548

VL700S – PN 54716

VL701S (Serial Standard) – PN 51247-01

# System Revision History

<b>System PN</b>	<b>EPN</b>	<b>Date</b>	<b>Requested By</b>	<b>Changes Made</b>
5438401	1801	08.02.2006	Balboa	New system
5438402	2143	05.29.2007	Balboa	n/a
5438403	2669	12.07.2007	Balboa	Software update to v41
5438404	2765	04.08.2008	Balboa	Software update to v43

# Basic System Features and Functions

## Power Requirements

- 240VAC, 60Hz, 40A, Class A GFCI-protected service (Circuit Breaker rating = 50A max.)
- 4 wires [hot, hot, neutral, ground]

## System Outputs

### Setup 1 (As Manufactured)

- 240V Pump 1, 2-Speed
- 240V Pump 2, 2-Speed
- 120V Ozone \*
- 12V Spa Light
- 120V AV (Stereo)
- 240V 5.5kW Heater \*\*

### Optional Devices

- 120V Circ Pump \*

\* Ozone and Circ Pump must be same voltage.

\*\* Heater wattage is rated at 240V. When running 120V to heater, output is approximately 25%.

## Additional Options

- Full Feature Dolphin Remote and Spa-only Dolphin Remote
- IR Receiver Module  
Connects to terminal J1 or J2
- MoodEFX Lighting  
Connects to Spa Light terminal J20
- FiberEFX Lighting  
Connects to Spa Light terminal J20

# Basic System Features and Functions

Any time you change a DIP Switch, other than A1, you must reset Persistent Memory for your new DIP Switch Settings changes to take effect. If you do not reset Persistent Memory, your system may function improperly.

## To reset Persistent Memory:

- Power down by disconnecting power source from spa.
- Put a jumper across J43, covering both pins. (See illustration below)
- Power up by connecting power source to spa.
- Wait until “P” is displayed on your panel.
- Power down again.
- Remove jumper from J43 (May also move to cover 1 pin only)
- Power up again.

## About Persistent Memory and Time of Day Retention:

This system uses memory that doesn't require a battery to store a variety of settings. What we refer to as Persistent Memory stores the filter settings, the set temperature, and the heat mode.

Persistent Memory is not used for Time of Day. Only models with a Serial Deluxe panel installed (VS5xxDZ and GS5xxDZ) can display the time. However, during power loss to the spa, the system will lose the correct time, and reset to 12:00 PM when power is restored.

J43 on VS5xxZ and VS300 Series Main Board Shown.

## Power Up Display Sequence

Upon power up, you should see the following on the display:

- Three numbers in a row, which are the SSID (the System Software ID). The third display of these numbers is the Software Version, which should match the version of your system. For example, if these three numbers are 100 67 38, that is a VS511SZ at version 38.
- Displayed next is: “24” (indicating the system is configured for a heater between 3 and 6 kW) or “12” (indicating the system is configured for a heater effectively\* between 1 and 3 kW). “24” should appear for all VS models running at 240VAC. “12” should appear for all VS models running at 120VAC, as well as all GS models. (\*A heater which is rated at 4 kW at 240VAC will function as a 1 kW heater at 120VAC.)
- “P” will appear to signal the start of Priming Mode.

At this point, the power up sequence is complete. Refer to the Reference Card for the VS or GS System model of your spa for information about how the spa operates from this point on, including how to adjust the Time of Day if using a Serial Deluxe style panel.

# Wiring Configuration and DIP Settings

## Setup 1 (As Manufactured)

- 240V Pump 1, 2-Speed
- 240V Pump 2, 2-Speed
- 120V Ozone
- 12V Spa Light
- 120V AV (Stereo)
- 240V 5.5kW Heater
- VL600S, VL700S, VL701S Main Panel
- 120V Circ Pump (optional)

**WARNING:** Main Power to system should be turned OFF BEFORE adjusting DIP switches.  
**WARNING:** Persistent Memory (J43) must be RESET to allow new DIP switch settings to take effect. (See Persistent Memory page)

**SSID #**

100  
68  
43

**Switchbank A**

A1, Test Mode OFF      A6, 60 Hz  
 A2, See Table 1      A7, N/A  
 A3, Off-board Pump enabled      A8, Degrees F  
 A4, Aux Freeze      A9, Non-Circ Mode  
 A5, 2-speed P1      A10, See Table 1

**VS51x/VS5xxS/VS5xxD Compatible**

**J43 Memory Reset**

**Wiring Color Key**

- 120 Volt Connections (Black line)
- 240 Volt Connections (Red line)
- Black AC Jumpers (Black line)
- 12 Volt Connections (Blue line)
- Relay Control Wires (Yellow line)

**Board Connector Key**

1 Typically Line voltage  
 2 Typically Line voltage for 2-speed pumps  
 3 Neutral (Common)  
 4 Ground  
 Note flat sides in connector

**Panel Button Assignments**

# DIP Switches and Jumpers Definitions

## SSID 100 68 43

## Base Model VS511SZ

### DIP Switch Key

- A1 Test Mode (normally OFF)
- A2+A10 Control amp draw requirements (See Table 1)
- A3 "ON" position: off-board pump enabled  
"OFF" position: off-board pump disabled
- A4 Aux Freeze (must be OFF)
- A5+A9 Pump 1 speeds and Circ Modes:

A5	A9	Circ Mode	Pump 1 Speed
OFF	OFF	Non-circ	2-speed
ON	OFF	Circ "acts like Pump 1 low" (filters/polls/ect)	1-speed
OFF	ON	24 hours with 3°F shut-off	1-speed
ON	ON	24 hours with 3°F shut-off	2-speed

- A6 "ON" position: 50Hz operation  
"OFF" position: 60Hz operation
- A7 N/A (must be OFF)
- A8 "ON" position: temperature is displayed in degrees Celsius  
"OFF" position: temperature is displayed in degrees Fahrenheit

**Table 1** # of Hi-Speed Pumps/Blower Before Heat Disabled

A2	A10	# of Hi-Speed Pumps/Blower Before Heat Disabled
OFF	OFF	0
ON	OFF	1
OFF	ON	2
ON	ON	3

### Jumper Key

#### J12 Factory set. DO NOT MOVE.

Jumper must be on Pins 1 and 2 for VS51xZ/VS5xxSZ/VS5xxDZ software.  
Jumper must be on Pins 2 and 3 for VS50xZ software.

- J43 When jumper is placed on 2 pins during power-up, system will reset persistent memory.  
Leave on 1 pin only to enable persistent memory feature.

### WARNING:

- Setting DIP switches incorrectly may cause abnormal system behavior and/or damage to system components.
- Refer to Switchbank illustration on Wiring Configuration page for correct settings for this system.
- Contact Balboa if you require additional configuration pages added to this tech sheet.

### Panel Button Positions

### Panel Button Assignments

- 1=Mode
- 2=Temp Up
- 3=Temp Down
- 4=Light
- 5=Pump 1
- 6=Pump 2 (when A3 is ON)
- 7=Unused

### Aux Panel Information

Supports 2-button aux panel

Supports 4-button aux panel

# Ozone Connections

**Ozone Connector Voltage:** The VS500Z circuit board is factory configured to deliver a preset voltage (120V or 240V) to the on-board ozone connector (J29). See the ratings table on the wiring diagram attached to the cover of the enclosure for the configured voltage. For 240V output W2 connects to Red AC and for 120V output W2 connects to White AC.

The voltage to the ozone connector can be changed in the field if required. W2 just needs to be set for the required voltage.

**WARNING: Changing the voltage of the ozone connector also effects the voltage supplied to the circ pump connector (J47). Any equipment controlled by that connector may be damaged if the wrong voltage is selected.**

**Balboa Ozone Generator:** If the board is set up to operate a 120V ozone generator, the connector on the ozone generator is likely to be configured correctly, but should be compared to the illustration below.

If a 240V ozone generator is required, be sure the red wire in the ozone cord is positioned in the connector next to the green ground wire as described below.

*Note: A special tool is required to remove the pins from the connector body once they are snapped in place. Check with your Balboa Account Manager for information on purchasing a pin-removal tool.*

## Balboa Ozone connector configuration for 120V 60Hz

- Line - Black conductor
- Use this slot for the leftover Red conductor
- Common - Install the White conductor here for 120V ozone
- Ground (Green) conductor

Flat sides of sockets as shown

## Balboa Ozone connector configuration for 240V 60Hz

- Line - Black conductor
- Use this slot for the leftover White conductor
- Common - Install the Red conductor here for 240V ozone
- Ground (Green) conductor

- Line - Black conductor
- Use this slot for the leftover conductor
- Common - Red for 240V or White for 120V ozone (See W2 wire)
- Ground (Green) conductor
- W2 wire determines voltage

# Serial Standard Panel Configurations

VL600S

PN 54548 with Overlay PN 11774

- Connects to Main Board terminal J1 only\*
- Not compatible with fully-equipped VS510SZ, VS503/504/514SZ, or VS520SZ.

VL700S

PN 54716 with Overlay PN 11756

- Connects to Main Board terminal J1 only\*

VL701S (Serial Standard)

PN 51247-01 with Overlay PN 10402

- Connects to Main Board terminal J1 only\*

SETUP 1

\* Panels with back-lighting (bulbs installed) should never be plugged into J2. Use J1 only. If the backlight bulbs are removed, then both J1 and J2 may be used.
