

VS300FC5 Tech Sheet

Balboa Water Group System PN 55646

System Model # VSP-VS300FC5-CCAH

Software Version # 41

EPN # 3129

Base PCBA - PN 55647

PCB VS500Z - PN 22972 Rev D

Base Panels

VL200 – PN 55123 (O/L 11852)

VL240 – PN 55456 (O/L 11745)

VL260 – PN 55081 (O/L 11746)

VL401 – PN 54665 (O/L 11885)

VL406U – PN 55350 (O/L 11947)

System Revision History

System PN	EPN	Date	Requested By	Changes Made
55646	3129	02-11-09	BWG	Initial release
55646	3129	02-13-09	Customer	Change Setup 1 to 120VAC
55646	3129	02-17-09	Balboa	PCBA Part number

Basic System Features and Functions

Power Requirements

- 120/240VAC, 60Hz, 16/32A, Class A GFCI-protected service (Circuit Breaker rating = 20/40A max.)
- 3 or 4 wires [hot, hot (optional), neutral, ground]

System Outputs

Setup 1 (As Manufactured)

120VAC input convertible to 240VAC by adding line 2 - red. Only the heater runs at 240V

- 120V Pump 1, 2-Speed
- 120V Ozone *
- 12V Spa Light
- 5.5kW @ 240V Heater - (Approx 1.4kW @ 120V)**

Setup 2 (As Manufactured)

- 240V Pump 1, 2-Speed
- 240V Ozone *
- 12V Spa Light
- 5.5kW @ 240V Heater **

* Ozone runs with P1-low and must be same voltage as Pump 1.

** Heater wattage is rated at 240V. When running 120V to heater, output is approximately 25%.

Additional Options

- MoodEFX Lighting
Connects to Spa Light terminal J20
- FiberEFX Lighting
Connects to Spa Light terminal J20

Basic System Features and Functions

Any time you change a DIP Switch, other than A1, you must reset Persistent Memory for your new DIP Switch Settings changes to take effect. If you do not reset Persistent Memory, your system may function improperly.

To reset Persistent Memory:

- Power down by disconnecting power source from spa.
- Put a jumper across J43, covering both pins. (See illustration below)
- Power up by connecting power source to spa.
- Wait until “P” is displayed on your panel.
- Power down again.
- Remove jumper from J43 (May also move to cover 1 pin only)
- Power up again.

About Persistent Memory and Time of Day Retention:

This system uses memory that doesn't require a battery to store a variety of settings. What we refer to as Persistent Memory stores the filter settings, the set temperature, and the heat mode.

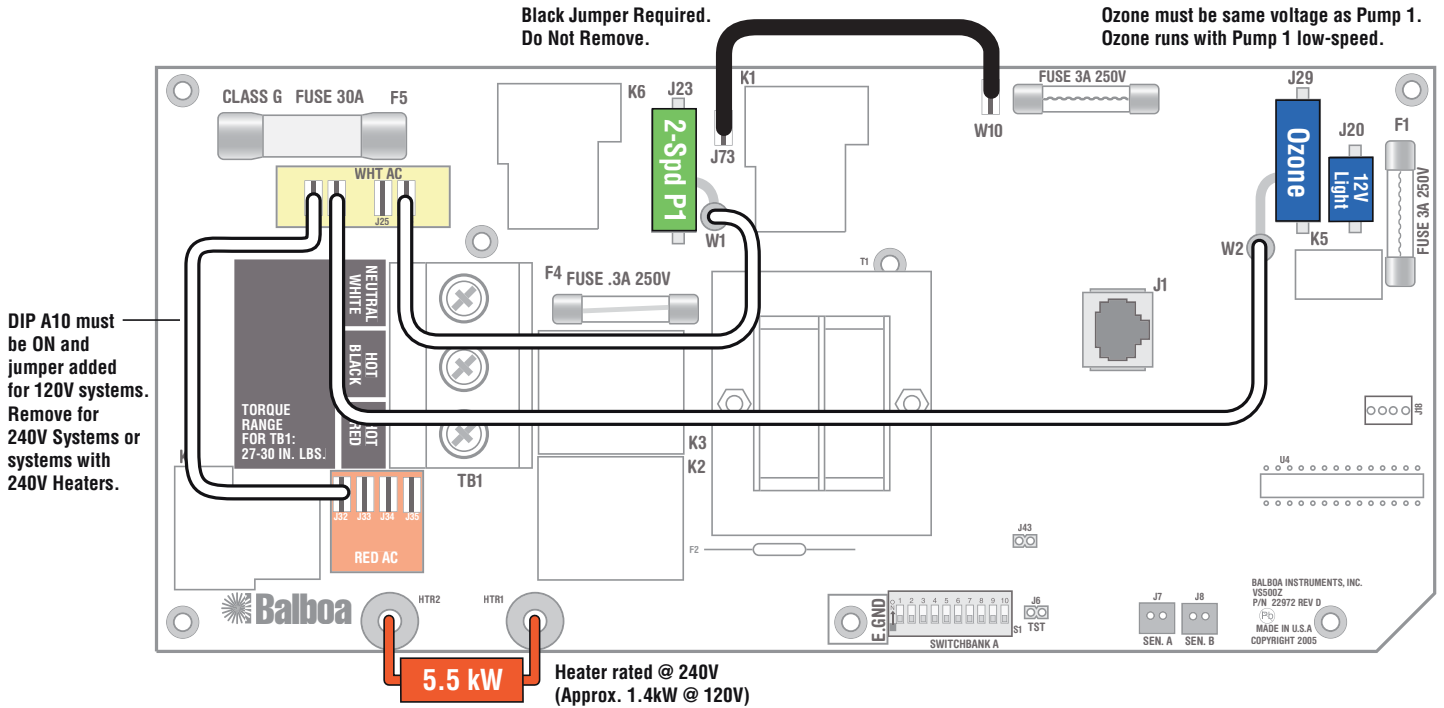

Persistent Memory is not used for Time of Day. Only models with a Serial Deluxe panel installed (VS5xxDZ and GS5xxDZ) can display the time. However, during power loss to the spa, the system will lose the correct time, and reset to 12:00 PM when power is restored.

Wiring Configuration and DIP Settings

Setup 1 (As Manufactured)

- 120V Pump 1, 2-Speed
- 12V Spa Light
- 120V Ozone
- 5.5kW @ 240V Heater (Approx. 1.4kW @ 120V)

WARNING: Main Power to system should be turned OFF BEFORE adjusting DIP switches.
WARNING: Persistent Memory (J43) must be RESET to allow new DIP switch settings to take effect. (See Persistent Memory page)

Switchbank A

- | | |
|-----------------------|--------------------------|
| A1, Test Mode OFF | A6, 60 Hz |
| A2, P1, LT, TD, TU | A7, Mode changes allowed |
| A3, Mini Panel | A8, Degrees F |
| A4, N/A (must be OFF) | A9, See Table 1 |
| A5, See Table 1 | A10, Low Amp mode |

Wiring Color Key

- 120 Volt Connections (Black line)
- 240 Volt Connections (Red line)
- Black AC Jumpers (Black line)
- 12 Volt Connections (Blue line)
- Relay Control Wires (Yellow line)

Board Connector Key

- 1 Typically Line voltage
 - 2 Typically Line voltage for 2-speed pumps
 - 3 Neutral (Common)
 - 4 Ground
- Note flat sides in connector

- Panel Button Assignments**
- 1=Pump 1
 - 2=Light
 - 3=Temp Down
 - 4=Temp Up

Wiring Configuration and DIP Settings

Setup 2

- 240V Pump 1, 2-Speed
- 12V Spa Light
- 240V Ozone
- 5.5kW @ 240V Heater

WARNING: Main Power to system should be turned OFF BEFORE adjusting DIP switches.
WARNING: Persistent Memory (J43) must be RESET to allow new DIP switch settings to take effect. (See Persistent Memory page)

DIP Switches and Jumpers Definitions

SSID 100 59 41

Base Model VS300F

DIP Switch Key

- A1 Test Mode (normally OFF)
- A2 "ON" position: Button layout will be: Pump 1, Light, Temp Down, Temp Up *
"OFF" position: Button layout will be: Unused, Pump 1, Temp, Light
- A3 "ON" position: use Mini Panel * 
"OFF" position: use Lite Duplex or Digital Duplex panel  
- A4 N/A (must be OFF)
- A5 Pump 1 high-speed timeout, see Table 1
- A6 "ON" position: 50Hz operation
"OFF" position: 60Hz operation
- A7 "ON" position: Standard mode only
"OFF" position: Std/Ecn/Sleep mode changes allowed
- A8 "ON" position: temperature is displayed in degrees Celsius
"OFF" position: temperature is displayed in degrees Fahrenheit
- A9 Pump 1 low-speed timeout, see Table 1
- A10 "ON" position: heater is disabled while the high-speed pump is running (low amperage mode)
"OFF" position: heater can run while the high-speed pump is running (high amperage mode)

Table 1		Pump 1 Timeouts	
A5	A9	Low-spd	Hi-spd
OFF	OFF	2 hours	15 min
ON	OFF	2 hours	30 min
OFF	ON	15 min	15 min
ON	ON	30 min	30 min

* Panels with button layout  are not compatible when A2 or A3 is ON.
Note: No blower or second pump available.

Jumper Key

- J43** When jumper is placed on 2 pins during power-up, system will reset persistent memory.
Leave on 1 pin only to enable persistent memory feature.

WARNING:

- Setting DIP switches incorrectly may cause abnormal system behavior and/or damage to system components.
- Refer to Switchbank illustration on Wiring Configuration page for correct settings for this system.
- Contact Balboa if you require additional configuration pages added to this tech sheet.

Panel Button Assignments

A2:OFF	1=Unused 2=Pump 1	3=Temp 4=Light
A2:ON	1=Pump 1 2=Light	3=Temp Down 4=Temp Up

Ozone Connections

Ozone voltage must be wired to same voltage as Pump 1.

Ozone Connector Voltage: The VS300/VS300F circuit board is factory configured to deliver a preset voltage (120V or 240V) to the on-board ozone connector (J29). See the ratings table on the wiring diagram attached to the cover of the enclosure for the configured voltage. For 240V output W2 connects to Red AC and for 120V output W2 connects to White AC.

The voltage to the ozone connector can be changed in the field if required. W2 just needs to be set for the required voltage. **Reminder: Ozone voltage must be set to match Pump 1 voltage.**

Balboa Ozone Generator: If the board is set up to operate a 120V ozone generator, the connector on the ozone generator is likely to be configured correctly, but should be compared to the illustration below.

If a 240V ozone generator is required, be sure the red wire in the ozone cord is positioned in the connector next to the green ground wire as described below.

Note: A special tool is required to remove the pins from the connector body once they are snapped in place. Check with your Balboa Account Manager for information on purchasing a pin-removal tool.

Balboa Ozone connector configuration for 120V 60Hz

- Line - Black conductor
- Use this slot for the leftover Red conductor
- Common - Install the White conductor here for 120V ozone
- Ground (Green) conductor

Flat sides of sockets as shown

Balboa Ozone connector configuration for 240V 60Hz

- Line - Black conductor
- Use this slot for the leftover White conductor
- Common - Install the Red conductor here for 240V ozone
- Ground (Green) conductor

- Line - Black conductor
- Use this slot for the leftover conductor
- Common - Red for 240V or White for 120V ozone (See W2 wire)
- Ground (Green) conductor
- W2 wire determines voltage

Duplex Panel Configurations

VL200 (Mini Panel)
 PN 55123 with Overlay PN 11852
 • Connects to Main Panel terminal J1

VL260 (MVP260)
 PN 55081 with Overlay PN 11746
 • Connects to Main Panel terminal J1

Switchbank A

DIP switch A3 must be ON for VL200, VL240 and VL260

VL240 (MVP240)
 PN 55080 with Overlay PN 11745
 • Connects to Main Panel terminal J1

VL406U
 PN 55350 with Overlay PN 11947
 • Connects to Main Board terminal J1
 • Cannot convert to VL406T by changing overlay

Switchbank A

DIP switch A3 must be OFF for VL401 and VL406U

VL401 (Lite Digital)
 PN 54665 with Overlay PN 11885
 • Connects to Main Panel terminal J1

MAIN PANELS

OPTIONAL PANELS
