

arm assembly

A

B

C

1. To identify which arm or leg goes with each form, refer to the last five imprinted digits located near the magnetic plates (image A, left).

2. Attach the arms and leg, if removable, by lining up the locating pins in the arm and leg into the holes of the shoulder or leg plates. The magnetic fittings will help guide the arms and leg into place (image B, left)

3. Shoulder and leg seams should be smooth and tight when the arms and leg are properly attached (image C, left).

****note:**

When moving the mannequin to a new location, be sure to remove the arms and leg before relocating the mannequin. If they drop, the hands, arms and legs may be damaged.
