

## calf fitting assembly

1. Locate the post insert fitting on either calf of the mannequin torso. Do not attach arms and removable leg during this step (image A, left).

2. Lift the mannequin and gently lower the insert onto the base post. Do not force the mannequin down, it should slide down easily. If it does not, simply alter the angle of the mannequin until it slides down easily (image B, left).

3. Do not let the mannequin slam down into place. Guide the mannequin down the post until feet contact the base (image C, left).

4. The insert is designed to interact with the base post to allow the mannequin to be positioned in the correct orientation. Once in place the mannequin should stand straight and securely (image D, left). Arms and removable leg can be set as mannequin is being dressed. Clothing can be adjusted
