Scatter Tube Instructions for Use

- 1) Remove lid and inner (white) tube. Place white tube on a flat surface with open end facing upwards. Slowly fill the white tube with cremated remains. (using a funnel if required)

- 2) Squeeze a generous line of glue around the inside circumference of the outer tube (the one that has the printed image and has a hole in the base) approximately one inch below the rim.

- 3) Line up the openings of both tubes and push the outer tube downwards slowly, to allow air to escape through the vent hole.

- 4) Once the tubes are firmly in place, attach the label provided over the vent hole.

- 5) Invert the tube and replace the lid. Align the image.
