

How to Regenerate a Manual Water Softener

In Normal Service

Ensure that the top hose in connected to your water supply

Ensure that the bottom hose is connected to your machine

In service mode ensure that both taps are in the 9 O'clock position.

To Add Salt

Turn the top valve to the 3 O'clock position

Unscrew the top black knob and remove from the body of the softener

Add dishwasher salt to within 1 inch of the top. Replace the black knob making sure there is no salt residue on the seal

Regeneration

To regenerate the softener, turn the top valve back to the 9 O'clock position, turn the bottom valve to the 3 O'clock position.

Water should now run from the reverse side of the bottom valve. The softener is now being regenerated by the salt, leave for 30 minutes and then return the bottom valve to the 9 O'clock position

Your softener is now regenerated
