

# 2011-2016 SUPER DUTY HUD INSTALLATION

## STEP 1

Plug the cable in the kit into the OBDII port that is located under the trim piece below the steering wheel

## STEP 2

Pull the rubber seal in between the door away from the truck then tuck the cable behind the side trim piece as you run it to the top of the dash

## STEP 3

Tuck the cable in between the dash and the windshield to hide the cable so that just enough of the cable is out to be plugged into the HUD unit, then plug the cable into the HUD unit.

## STEP 4

Use the included prep wipes to clean off your desired mounting location, then remove the proactive covering from the adhesive then firmly press the kit on your desired mounting location and hold it for 15-30 seconds.

## STEP 5

Now that the unit is mounted line up the reflective film with the display on the windshield to provide the clearest image on the windshield, be sure to smooth out any air bubbles in the film.
