

# 2021 F150 MKII FOG KIT INSTALLATION

To gain access to the Fog light bulb, going through the wheel well liner is the easiest way.

## STEP 1

Remove the three screws seen in the photos below to be able to push your wheel well liner out of the way. Using a size 7mm socket or a phillips head screw driver remove the screws in the photos below.

The first two screws are located right inside the wheel well, and the screw connecting the wheel well liner to the trim piece is at the top of the wheel well.

Once you have removed these screws, push the wheel well liner out of the way to gain access to the Fog bulb.

## STEP 2

Remove the OEM Fog light bulb.

Disconnect the factory fog light harness for the OEM fog light bulb. Once you have done that, turn the fog light bulb counterclockwise to remove the OEM bulb.

## STEP 3

Install the Fog light Resistor and Bulb.

Before connecting the fog light resistor, install the MKII Fog light bulb into the fog housing by lining up the tabs on the bulb with the tabs in the housing and turning the bulb clockwise to lock it into place.

Now that the bulb is installed, plug the male end of the fog light resistor into the factory fog light harness.

Next take the female end of the fog light resistor and plug it into the MKII Fog light bulb.

## STEP 4

Using the screws provided with the kit mount the resistor unit to a metal surface so that it is not touching any plastic surface or any other wires as the resistor unit gets very hot due to the amount of voltage running through it.

*An alternate way to ensure the resistor is not touching any plastic surface or any other wires is using a zip tie to secure it as seen below.*

## STEP 5

Place the wheel well liner back into place and screw the screws back into place and repeat for the other side of the truck!
