

Microbes and plants are intimate partners in virtually every life process and nutrients are the food

PureAg PureSYNERGY Fulvic Acids is a water soluble powder derived from peat and other plants. This bio-nutrient contains 90% fulvic acid and has the unique ability of dissolving, converting and chelating trace minerals. This makes the minerals and nutrients readily and highly absorbable to the plant, especially through the root system.

Benefits of PureSYNERGY Fulvic Acids™

- * Accelerates production of nucleic acids.
- * Enhances photosynthesis and respiration.
- * Increases cationic exchange.
- * Increases beneficial microbial activity.
- * Enhances plant immunity for better stress management and overall health.

PureAg PureSYNERGY Fulvic Acids does not interfere with calcium, making it safer to apply on low calcium soils. Its capacity to penetrate the plants stoma permits the leaf to accept nutrients very rapidly (foliar applications as well). This low molecular weight humic acid binds to immobile and molecularly heavy minerals to then transport them into plant tissue for faster growth and bigger yields. Can be used for all plants in prepared soil, soil less media, coco blends, and hydroponics.

GUARANTEED ANALYSIS

Fulvic Content	90%
Humic Content	0.4%
Nitrogen (N)	0.19%
Available Phosphate (P ₂ O ₅)	5 - 6
Soluble Potash (K ₂ O)	0.14%
pH	6 - 7
Arsenic	ND
Cadmium	ND
Lead	ND

*ND=none detected

EFFECT ON SOIL:

- * Prevents NPK from leaching
- * Increases total cationic exchange and improves aeration condition.
- * Makes aggregates in soil produce better oxygenated penetration.

STORAGE:

Store in frost-free conditions with optimum non-flammable organic fertilizers away from sunlight.

KEEP OUT OF REACH OF CHILDREN.
