

Benefits of Let Them Eat Cake

- * Reduces soil-based pathogens and nematodes and works as a natural pest controller.
- * Reduces alkalinity in soil, as it produces organic acids on decomposition.
- * Compatible with soil microbes and rhizosphere micro flora and ensures the fertility of the soil.
- * A nitrification inhibitor, Neem Cake prolongs the availability of nitrogen to both short and long duration crops.
- * Rich source of NPK plus other micro nutrients so plants are fed continually.
- * Organic fertilizer. Bio-degradable and can be used with many other different types of fertilizers.

Microbes and plants are intimate partners in virtually every life process and nutrients are the food

PureAg Let Them Eat Cake cold pressed neem cake is an organic fertilizer with pesticidal properties. Neem cake reduces alkalinity in soil, as it produces organic acids on decomposition.

Because of its natural and organic nature, it is compatible with soil microbes, improves the rhizosphere micro flora and ensures fertility of the soil. By enhancing the organic matter content of the soil, the texture is boosted as well as the water holding capacity and soil aeration, which aids root development. Let Them Eat Cake contains both azadirachtin, a natural pest repellent, and NPK nutrients, making it an ideal organic fertilizer and healthy pest management alternative.

MINIMUM GUARANTEED ANALYSIS

Nitrogen	4.5%
Phosphorus	1.5%
Potassium	2.0%

Azadirachtin 1000 ppm, Nimbin 850 ppm, Salanin 1500 ppm

Oil Content 5-6%, pH 5, Calcium 0.5%, Magnesium 0.50%, Sulfur 0.15%

Total Aflatoxin (B1, B2, G1, G2) < 4 ppm, Arsenic, Cadmium, Chlorides, Copper, Lead, Mercury, Nickel - None

GENERAL RATE OF APPLICATION

New Plants:

Apply directly to the soil 2-3 weeks prior to planting. Spread close to the root zone. Mix with soil at a depth of 6-8 inches. Use 150 lbs per acre for low value crops and 350 lbs per acre for high value crops.

Established Plants:

Apply 2-5 ounces per plant and mix with soil and water thoroughly.

Trees:

Apply a minimum of .5-1 lbs per tree. Mix thoroughly with soil and water around the base at a depth of 6-8 inches.

USES:

PureAg Let Them Eat Cake can be used on organic and conventional agricultural crops, nurseries, golf courses, sports fields, erosion control, forestry and mine reclamation. Works well in greenhouses on ornamentals, perennials, annuals, vegetables, herbs, fruits, trees and shrubs.

Store in a cool, well ventilated area. Avoid low temperatures.
