Additional Tools You Will Need to Put Up Your Fencing

- Tape Measure
- Ladder
- Drill with Phillips Bit

Optional Accessories

Access Gate Kit

Tie Puller

Cutter Tool

Kitty Corral Existing Fence Conversion Kit

1. Attach the overhang extenders to your existing fence posts or building using the supplied Truss Head Screws or U-Bolts depending on type of existing Fence. When attaching to a corner, attach a wooden brace (commonly a 2" x 6" board, not included) to span the corner creating a surface on which to attach the extender at 45 degrees to the existing fence.
2. Level and center the extenders on your fence posts spacing them evenly along your fence line to make sure that your cat fence will be straight. It is important that the extenders be level to avoid any installation issues.
3. Starting with the first extender in your fence, attach the poly fencing material to the tip using a self-locking zip tie. Continue down the fence line attaching the fence through the hole at the tip of the extender.
4. Going back to the first extender of the fence, attach the remaining fencing material along the extenders using five zip ties per overhang extender.
5. Secure the bottom of the poly cat fence material to your fence or building using the appropriate fastener (Not Included). Fence staples are recommended for attaching to existing wooden fencing.
