

MAKE YOUR OWN LAYERS OF THE OCEAN BOTTLE

INGREDIENTS:

corn syrup, vegetable oil, rubbing alcohol, blue dish soap, blue food coloring, water

- 1 Measure $\frac{3}{4}$ cup of corn syrup. Add approximately 18-20 drops of blue food coloring and mix well. Add more if needed. This will be the darkest layer. Using a funnel, pour into the bottom of your quart-sized glass jar.
- 2 Measure $\frac{3}{4}$ cup of blue dish soap. Using the funnel, slowly pour in the dish soap to create the second layer.
- 3 Measure $\frac{3}{4}$ cup of tepid water. Add one drop of food coloring and mix well. Using the funnel, pour the water in very slowly. If you pour it in too quickly, you will end up with soap bubbles!
- 4 Measure $\frac{3}{4}$ cup vegetable oil. This layer is unable to be colored because it is oil, but illustrates the layer very well still! Pour slowly through the funnel.
- 5 Measure $\frac{3}{4}$ cup rubbing alcohol. Using an eyedropper or old medicine dispenser, very slowly add the rubbing alcohol for the final layer (squeezing it out against the side of the jar so it runs down on the inside works best!) Label the layers on the side of the jar!
