

Installing Your Rain Chain

Monarch's copper rain chain comes with a gutter attachment piece called "triangular hanger". This hanger is designed to sit in the rain gutter over the drain hole where the downspout was and helps direct the flow of water into the rain chain.

Option 1 Anchoring Your Rain Chain (Highly Recommended)

The rain chain installation option by Monarch International Inc. has been tested and increases rain chain stability and prevents water splashing. Anchoring works best especially in areas of wind and in areas of extreme cold / icy conditions.

1. Unhook the triangular hanger from the rain chain. (as shown in Step -1)
2. Mark two points at a distance of 6-8 inches along the back wall, just above the rain gutter drain hole (keep cup close to rain gutter drain hole this will prevent water splashing and will allow smooth flow of water into the rain chain).
3. Open the two ends (arms) of triangular hanger. (as Shown in Step 3 & 4)
4. The two ends (arms) of triangular hanger can be easily bent using pliers. (as shown in Step-5)
5. Anchor one end (arm) of triangular hanger with back wall using screw and washer. (as shown in Step-6)
6. Assemble the rain chain with triangular hanger. (as shown in Step-6)
7. Anchor the other end (arm) of triangular hanger with back wall using screw and washer.
8. Please ensure the screws are tightened.

Step-6

Installation Completed
Step-7

Option 2 Slide and Install (Quick Install Option)

1. Unhook the triangular hanger from the rain chain. (as shown in Step-1)
2. Slide the triangular hanger in the rain gutter drain hole. It will look like an upside down triangle sitting in the rain gutter drain hole.
3. Installation may require some slight bending of triangular hanger that can be easily done by hand or with pliers.
4. Assemble triangular hanger and rain chain. (as shown below)-Installation completed.

Assemble Rain Chain to your Rain Gutter

Installation and Usage Tips

Use a rain gutter filter to prevent debris and leaves from entering your rain chain.

Over time copper will gain a wonderful natural verdigris patina.

To shorten to your rain Chain:

1. Decide how short you would like the rain chain to be.
2. Remove the extra chain carefully using pliers.
