

HOW TO REQUEST A CODE AND USE IT TO RE-CONFIGURE A HEX FLASH PROGRAMMING TOOL CABLE.

1. Download and execute "XDEVICE" from VF-Engineering website download page.
2. Plug in your Hex-Flash programming cable into your USB (car is not needed).
3. Double click [Refresh List] and your cable ID should appear in the dialogue window.
4. Click on your "cable ID" in the dialogue box to highlight it.

5. Under the [Configuration] Tab as above, click on [Copy].
6. A pop-up will appear stating "Data has been copied to clipboard".
7. Click [OK] which closes the pop-up and then open an email to send to technical@vf-engineering.com and paste the data from the clipboard into the email by pressing [CTRL+V].
8. Repeat this step in the [License] and [End User] tabs and send off 1 email containing the 3 reference codes.
9. Once VF-technical receives the email with the 3 codes, it will prepare (24-48hrs) a code and email it back to you.
10. Once you receive this code, click [Update Firmware] and copy the code from the email and paste it into the pop-up window and click [OK]. This will enable the Hex Flash programming tool cable for the option you have specially requested from VF-Engineering/Hex Tuning.
