HENSEL TURNTABLE 360°, THE PRECISE TURNTABLE FOR PROFESSIONAL PRODUCT PHOTOGRAPHY

High-quality 360° product images are becoming increasingly more important. Online stores, the industry, museums, auction houses, insurances, and many others rely on them to best present the characteristics and features of products and objects on their websites. At the same time, demands on product speed, reliability, and expandability of such systems are steadily growing.

Hensel now offers an especially sturdy and reliable turntable that meets even highest demands. This Hensel Turntable 360°, made of best materials and high-grade components, has a load capacity of maximum 120 kg. This makes it ideal for a multitude of applications, from small pieces of jewelry to 360° pictures of an entire person, e.g. for images of clothing items.

You can control the Hensel Turntable 360° via WiFi or USB cable in your internet browser, independent of the operating system. The camera in use is directly connected to the Hensel Turntable 360° and is triggered automatically. The delivery includes a cable that the customer selects to match the individual camera type. This makes it a true stand-alone solution which is not dependent on integration into an existing system.

Even less experienced users can easily and efficiently produce first-class 360° images of many different motifs, especially in combination with the fast Hensel Expert D compact flashes well-known for their exceptional performance reliability and their steady color temperature.
