

Model: FH-8297

Product: Waste oil vacuum pump with 75L storage tank

Description: The ideal way of extracting waste motor oil from almost any vehicle through the dipstick instead of the oil sump. This method is cleaner, faster and negates the need to lift the vehicle up on a lift. This unit also comes with a transparent vacuum chamber for measuring the volume of oil that has been extracted as well as visually inspecting the condition of the oil. By measuring the amount of oil extracted, one can simply replace the same amount without having to consult a service manual.

Technical information	
Air supply pressure	7-9 Bar
Tank volume	75 Liter
Measuring vessel	10 Liter
Working oil temperature	40° - 60°C
Oil pumping probes	6 tubes (5-8mm)
Discharge pressure	0.6 - 0.85 Bar
