

Lash wash

WHY WASH?

Our lashes protect our eyes by catching all sorts of goodies from the environment. Not just that but our own oils, makeup, dead skin, and sweat can build up on our lash line. Keeping your lashes & lash line clean is integral for the health of your lash follicle. Unhappy follicles lead to unhealthy lashes! AND dirty lash lines lead to demodex infestations!

Demodex infestations can lead to the decline in the health of the lash follicle. Not to mention, demodex is GROSS!

WILL ANY WASH DO?

when it comes to client upkeep having your clients use a lash wash would be amazing. If they refuse to invest in one, make sure they are at least using a **gel or foaming cleanser**. Nothing creamy.

When it comes to **YOU** washing your client's lashes at the beginning of your appointment, what you use **ABSOLUTELY** matters! You always want to make sure you are using products that will create the best "lash climate" for the application process. See next page....

Demodex

Lash Wash

The Sweet P lash wash is a high quality Canadian made product. It's got many organic ingredients and ABSOLUELY NO damaging or toxic ingredients that are found in many other cheaper washes on the market.

A few things to note about the Sweet P wash:

- There is a very small amount of tea tree oil in this wash. Tea tree helps ward off any demodex infestations.
- You will find many natural oils in this wash. They do not affect the adhesive or bond in anyway if you are using an ethyl cyanoacrylate adhesive.

Fun fact

Sweet P does discounted rates when your purchase 10 or more washes. They will also allow you to private label the wash with your own label.

- The ph levels of the Sweet P wash are neutral. All lash washes that are used to prep your client's lashes before application should be a neutral ph level. This helps to create an optimal environment of the natural lash for the application process. Should the ph levels need to be adjusted after the fact, see info on Prime, primer.
