CLUE 1

INVENTION

Clue:

Born amongst tulip fields, this self-taught scientist invented device that firmly established his place in history as one of the first and most important explorers of the microscopic world. As 'the first even to think of looking—certainly, the first with the power to see', he used his invention to name what he saw in his native language.

What does that translate to in English?

Answer:

Clue:

Could we ever again smell flowers driven to extinction? Biotechnologists and artists teamed up to do just that - using the power of DNA, biology, and chemistry, a talented team brought back the scent of three extinct flowers - the *Hibiscadelphus wilderianus* Rock, the *Orbexilum stipulatum*, the '*Leucadendron grandiflorum* (Salisb.) R. Br.' - to encourage us to contemplate our actions, and potentially change them for the future.

What did the biologists get from the preserved flowers that would encode the cellular processes that would create the extinct flowers' fragrant molecules?

CLUE 2

SENSES

Answer:
