<i>Keywords:</i> Dry toilet, closed toilet, self contained toilet, ecological labelling, ecolabelling	<i>Sphere:</i> Sludge and refuse treatment and disposal
--	--

Summary:
The MullToa Komfort XL model was tested by Jordforsk according to the criteria given in the Test method for closed Toilet Systems version 2.4 of 4.juni 1999 from Nordic Ecolabelling.
The toilet meets the requirements for material and construction. The toilet meets the requirements for function testing for four population equivalents (p.e) when the compost is matured in an external emptying tray. For continuous use the toilet must therefore be equipped with two emptying trays. The instructions for use also meet the given requirements.
The toilet meets all the requirements for Nordic ecolabelling and we therefore recommend the manufacturer to apply for approval for Nordic ecological Svane label.
