**Application:** For use in general purpose weighing applications when interfaced with an NTEP certified and compatible indicating element.

**Identification:** All required information is on an adhesive badge located under the platter that repeats the word "VOID" if removed.

**Sealing:** The weighing/load-receiving element has no metrological functions that require the use of a security seal. Calibration and configuration of the scale is done through the indicator.

**Test Conditions:** This certificate is issued based upon the following tests and upon information provided by the manufacturer. The emphasis of the evaluation was on device design, marking, performance and compliance with influence factor requirements. For this evaluation, five units were submitted: a model SL-915, 6 lb x 0.001 lb; a model SL-915-SS-HP, 30 lb x 0.005 lb; a model SL-915, 60 lb x 0.01 lb; a model SL-915, 150 lb x 0.02 lb; and a model SL-915, 1500 lb x 0.2 lb. Each W/LRE was connected to a Locosc model LP7510C or LP7510E indicating element (NTEP CC 20-011). Several increasing/decreasing load tests, level indicator tests, shift tests, and discrimination tests were performed. The devices were tested over a temperature range of -10 °C to 40 °C (14 °F to 104 °F). A load of approximately one-half capacity was applied over 100 000 times to each scale. The scales were tested periodically during this time.
