HRP Equestrian Saddle Pads

Scientifically proven & unique patented design to reduce pressure on the thoracolumbar spine (behind the saddle)

- Reduces the risk of local muscle strain
- Helps prevent localised over-heating by reducing the formation of moisture and sweat
- Helps to prevent muscle dehydration and muscle fatigue
- Enhances comfort for the horse and peace of mind for the rider
- Visually striking

All HRP Wing® Saddle Pads benefit from a world first densely padded area at the girth, which they **have called the Thorax pad™**. **The Thorax pad™ has been invented to add additional comfort to horses who are sensitive when being girthed.**

Made from technologically advanced lightweight wicking fabric with a suede effect inner which adds a non-slip effect.

HRP Equestrian Saddle Pads

HRP
EQUESTRIAN

Mono or Dual Wing?

If you use a half pad over your saddlecloth then choose a **DUAL WING** design

This will avoid squashing the WING and therefore losing the benefit

Choose a **MONO WING** if you use a saddle pad and no half pad

Fitting

To find the correct size

Measure the barrel of the horse for the depth of the pad and the length of the saddle for the length of the pad. Ensure that the pad is long enough so that the saddle is not sitting on the binding

HRP Equestrian Saddle Pads

Jump Pro Wing - Black, Navy or White

Mono

FULL SIZE measures 66.5cm in length from the front of the pad at the D ring loop to the back (measured from inside binding to binding). The drop is 50cm (measured from inside binding to binding). The thorax pad (girthing point) starts at 35cm

COB SIZE measures 62.5cm in length from the front of the pad at the D ring loop to the back (measured from inside binding to binding). The drop is 48cm (measured from inside binding to binding). The thorax pad (girthing point) starts at 33cm

Dual

FULL SIZE measures 66cm in length from the front of the pad at the D ring loop to the beginning of the WING (measured from inside binding to binding). The drop is 49cm (measured from inside binding to binding). The thorax pad (girthing point) starts at 36cm

COB SIZE measures 61cm in length from the front of the pad at the D ring loop to the beginning of the WING (measured from inside binding to binding). The drop is 44.5cm (measured from inside binding to binding). The thorax pad (girthing point) starts at 31cm

GP Square Wing - Black, Navy or White

Dual only

FULL SIZE measures 55cm in length from the front of the pad at the D ring loop to the beginning of the WING (measured from inside binding to binding). The drop is 52cm (measured from inside binding to binding). The thorax pad (girthing point) starts at 39cm

COB SIZE measures 51cm in length from the front of the pad at the D ring loop to the beginning of the WING (measured from inside binding to binding). The drop is 48cm (measured from inside binding to binding). The thorax pad (girthing point) starts at 35.5cm

Dressage Wing - Black, Navy or White

Mono

FULL SIZE measures 57cm in length from the front of the pad at the D ring loop to the back (measured from inside binding to binding). The drop is 54cm (measured from inside binding to binding). The thorax pad (girthing point) starts at 42cm

COB SIZE measures 52cm in length from the front of the pad at the D ring loop to the back (measured from inside binding to binding). The drop is 50.5cm (measured from inside binding to binding). The thorax pad (girthing point) starts at 39cm

PONY SIZE measures 48cm in length from the front of the pad at the D ring loop to the back (measured from inside binding to binding). The drop is 46cm (measured from inside binding to binding). The thorax pad (girthing point) starts at 34cm

Dual

FULL SIZE measures 53cm in length from the front of the pad at the D ring loop to the beginning of the WING (measured from inside binding to binding). The drop is 58cm (measured from inside binding to binding). The thorax pad (girthing point) starts at 47cm

COB SIZE measures 49cm in length from the front of the pad at the D ring loop to the beginning of the WING (measured from inside binding to binding). The drop is 53cm (measured from inside binding to binding). The thorax pad (girthing point) starts at 41cm
