

Seed Spreading

We can quickly and accurately spread seeds for you pastures, lawns, food plots, right of ways, and areas needing erosion control.

You never have to worry about it being too wet to get out into the field or disturbing and damaging the fresh soil you just smoothed.

Let us spread your seed for you!

- Ryegrass
- Bermuda Grass
- Fescue
- Clovers
- Cover Crops

With some mechanical help

- Cereal grains (wheat, oats, rye)
- Food Plots

About Us

We started Texas Country Farm Supply in 2010 by purchasing the Pilgrim's Feed Store that had been in business for 60+ years. We have always strived to provide great customer service and the knowledge people needed to have successful farms and ranches. It became our motto that "We are more than just a feed store".

As we moved along with our retail store we started adding services such as pasture spraying and fertilizing using ground equipment. We are now proud to offer aerial application of herbicides, fungicides, seeds, fertilizers, and more.

We use a **DJI Agras T40** Drone to provide this service.

Texas Country Farm Supply

Drone Service
903-855-8458

Serving Texas with aerial application services for your farms, ranches, yards, ponds, right of ways and more.

Herbicide and Fungicide

We use accurate multi satellite GPS to apply several different products to your crops and pastures. We are able to save money in chemical cost by programming the map into the drone and letting it fly autonomously. We are also able to get into fields and over taller crops that ground equipment can't. No need to worry about us going over too rough a pasture or getting a flat from mesquite or black locust trees.

With a 10.5 gallon tank we can cover 5 acres per trip and about 40 acres an hour depending on the fields. We use less water than with ground spraying and get the some coverage and uptake by using good adjuvants with each product. The downward thrust of the propellers will actually push the spray pattern down into the intended target, limiting the amount of drift.

Pond Management

We can help get that back yard pond or small lake free of weeds and algae so it is a more desirable place to swim, fish, and be around throughout the year. We can also apply dye to your waters so that it will give you a more pleasing look while also blocking the sunlight from allowing more weeds to start growing.

Fire Ant Control

It has always been hard to spread a fire ant bait consistently over a large area at such a low until now. With the Agras T40 we can monitor and adjust the flow rate on the fly, literally. Extinguish Fire Ant Bait has an aerial application label and is an excellent product in the control of fire ants whether it's in your yard, hay meadows, or pastures.

Right of Way Control

With an adjustable spray and spread width pattern we are able to get down ROWs whether it is for herbicide control, seeding applications, fertilizing, and/or mapping and inspections. We have minimal to no footprint so it is easy for us to get across multiple properties without disturbing the owners. We are also able to take images of the right of way and then process them into a terrain map for our clients.

Clear-Cut Forest Management

Without extensive dozer and/or mulching work then cleanup after a clear cut project can be almost impossible. With our drone we can keep the regrowth under control and also seed areas where erosion could cause a problem.
