MILITARE Chrono

Ref. AM-1120 / 1122 / 1123 / 1128 / 1148

- A** Water-resistant crown with locking protective lever
- B** Hour hand treated with Super-LumiNova®
- C** Minute hand treated with Super-LumiNova®
- D** Small second hand treated with Super-LumiNova®
- E** Small minute chronograph hand treated Super-LumiNova®
- F** Central second chronograph hand, treated Super-LumiNova® depending on the models
- G** Water-resistant start/stop push-button for chronograph function
- H** Water-resistant reset push-button for chronograph function

Position 1.1: The watch water resistance is guaranteed. The crown is locked by the patented protective lever integrated into the watchstrap. In this position, the watch can be wound manually after unlocking the crown (see "Getting started").

Position 1.2: Time setting.

PATENTED CROWN LOCKING DEVICE

Position 2.1: Locked position

Position 2.2: Unlocked position

WARNING: The protective lever is designed to block the crown when the watch is worn. If the strap is not fastened around the wrist, security of the crown is not ensured.

NOTE: When the watch has not been worn or wound for more than 35 hours, it is recommended to rewind it in order to ensure sufficient power reserve and accurate operation (see "Getting started").

GETTING STARTED

When the watch is used for the first time or when it stops, it must be wound manually as follow:

1. Unlock the protective lever: push the bracelet down to release the crown (position 2.2).

WARNING: In this position, water resistance is not guaranteed and the crown is not protected. Repeatedly opening and closing the lever can affect the mechanism; do so only when necessary for manual winding or time setting.

2. Turn the crown clockwise for 15-20 rotations to fully wind the movement.

3. Lock the protective lever: push the bracelet up to block the crown until you hear a click. To ensure that the crown is fully locked, the protective lever must be placed in the low position (position 2.1). In this position, the watch is water-resistant to 12 ATM (see “Patented Crown Locking Device” on previous page).

WARNING: The protective lever is designed to block the crown when the watch is worn. If the strap is not fastened around the wrist, security of the crown is not ensured.

TIME SETTING

1. Unlock the protective lever: push the bracelet down to release the crown (position 2.2).

WARNING: In this position, water resistance is not guaranteed and the crown is not protected. Repeatedly opening and closing the lever can affect the mechanism; do so only when necessary for manual winding or time setting.

2. Setting the time: once the protective lever is unlocked, pull out the crown completely to the click (position 1.2). Rotate the crown counterclockwise to set the time.

3. Ensure the crown is correctly set back to its initial position (position 1.1).

4. Lock the protective lever: push the bracelet up to block the crown until you hear a click. To ensure that the crown is fully locked, the protective lever must be placed in the low position (position 2.1). In this position, the watch is water-resistant to 12 ATM (see “Patented Crown Locking Device” on previous page).

WARNING: The protective lever is designed to block the crown when the watch is worn. If the strap is not fastened around the wrist, security of the crown is not ensured.

CHRONOGRAPH OPERATING

Chronograph starting and stopping:

To start the chronograph: Press the push-button at 2 o'clock (G). Once started, the chronograph will track elapsed seconds with central second hand (F) as well as the minutes on the counter at 9 o'clock (E).

To stop the chronograph: Press again the push-button at 2 o'clock (G). If you press the same push-button (G) again, the chronograph will restart from the intermediate stop.

Chronograph resetting:

To reset the chronograph: It must first be stopped by pressing the push-button at 2 o'clock (G). Once this has been done, press the push-button at 4 o'clock (H) to reset it.

WARNING: You must always press the push-buttons (G & H) following the below sequence:
G: Start / G: Stop / H: Reset.

If this order is not followed, the mechanical movement of the watch may be damaged.

TECHNICAL FEATURES

Case

Bronze, steel 316L or steel 316L treated PVD & DLC depending on the models, diameter 43.50 mm, height 14.50 mm, cushion shape, sapphire crystal with anti-reflective coating, open case-back.
