iFUEL® TANK
Real Time Stock Control

Complete control of multiple tank and site stocks from one screen.

- iFUEL Tank integrates with the markets most popular tank gauge systems via a simple cable connection offering easy and effective web based stock reconciliation.

- iFUEL Tank is an integrated live linked communication device designed to transmit the data from your automatic tank gauging system to the iFUEL Cloud web site.

- View the contents of your tank, LIVE, via our iFUEL Cloud software package anywhere in the world 24/7.

- We recommend pairing the iFUEL Tank with either the Piusi OCIO, Veeder Root TLS, Franklin Colibri Automatic Tank Gauges or OLE Range of tank gauges.

- In addition setup automated emails to notify the depot manager or fuel supplier that a delivery is required. Receive notifications when a delivery arrives and the stock levels are updated.

- Built in GPS module and antenna automatically updates the web portal with tracking and location services.

- The iFUEL Tank unit communicates automatically to the secure iFUEL Cloud stock management web portal, sending real-time event updates for single or multiple tank stocks. The frequency of stock updates can be customised dependent on the data plan: Once a day, once an hour or real-time… choose a frequency to suit your business needs.

Features

- Two models are available:

  iFUEL Tank 1 - will monitor one tank

  iFUEL Tank - will monitor up to 4 tanks, with an expansion card available to increase this to 8 tanks.

- iFUEL Tank is configured with various alarms and reports including:
  - Tank low level.
  - Tank high level.
  - Tank theft alert.
  - Tank contents.
  - Tank history - filling and decanting.
  - Suitable for use with Diesel, Lubricants, Coolant, Water, Adblue®, Chemicals, Gasoline and Aviation Fuels.

  * NOTE for flammable liquids the iFUEL Console is to be mounted outside of the defined site flammable vapour zone.
