

How the nappy works

Both Baba+Boo newborn and one size nappies are supplied with 2 inserts. When your baby is small, one insert should provide 2-3 hours of dryness. As your baby grows, you will need to use two inserts. This can provide up to 5 hours dryness but this does depend on each baby.

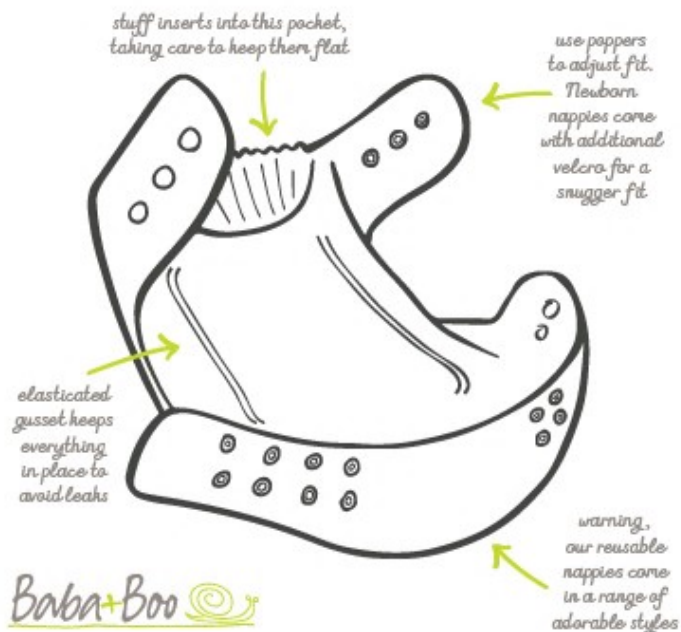

How to use it

Firstly, you need to stuff the inserts into the pocket at the back of the nappy. Ensure the inserts are laying flat inside the nappy.

How to adjust it

Both our newborn and one size nappies come with a popper system on the front. You simply snap the poppers together to make the nappy smaller and when your baby grows, simply move them down a rise.

Once your nappy is adjusted, simply pop on your baby using the velcro or snaps. You will find more fitting advice on our website.

Look after your nappies and they'll look after you...

1. Pre-washing before use, helps increase absorbency. Follow washing instructions below and repeat up to 3 times
2. After use, knock any solids into the toilet or remove liner if you have used one. Place nappy into nappy bucket until wash day. When washing, put nappies through a cold rinse cycle first
3. They can be washed on 60°C, although 40°C is usually sufficient too and only use half the detergent you would normally use. This prevents detergent build up in the nappies
4. Do not use fabric conditioner or bleach
5. Once washed, again put them through a cold rinse cycle
6. Nappies can be dried naturally or on a low heat setting in the tumble dryer
7. Do not use any barrier/nappy rash cream when using our nappies
