

How to Install

- Remove the old laces from your shoes. Put them on to install Lock Laces®
- Run the Lock Laces® through the shoe's aglets in a crisscross pattern
- After lacing up, readjust your laces once as per your comfort
- Keeping the Lock Device button pressed, thread both ends of the lace through it. Slide the lock till the tongue of the shoe
- Test the fit and readjust the length by pressing the lock button
- Trim the extra length with a pair of scissors, ideally leaving 2-3 inches for future adjustments. You can singe the ends with a candle or lighter
- Slide the laces through the Cord Clip so that its teeth are facing forward. Clamp it shut to secure

P.S.: Please do not take off your laces once installed. It will be difficult to pass them through the aglets again. Also, view how to [Reinstall the Cord Clip](#)
