

How to Apply?

- **Equipment:** 50 ml Oxon Sure Grip Anti-Slip Solution, an alarm clock or a smartphone with Timer, a clean and dry Spraying Bottle or a small mug/container, a clean Roller or small Paintbrush, a Mop or Plastic Brush and a slightly used fiber Scrub Pad (such as Scotch Brite Scrub Pad).

Do not use a steel wool type abrasive scrub.

Essential gear for Applicator - Plastic Gloves, Eye Protection (Glasses) and Covered Shoes

- **Planning:** If working alone as a Single Applicator, we recommend dividing the floor into sections of 25-30 sq. ft. to work on at a time. Start from the point furthest from the exit and work your way out.

- **Preparation:**

1. Clean the surface and make sure it is free from dirt or grease and Use the Scrub Pad to remove all the grime between the tiles/floor panels.
2. If the floor was cleaned with a bleach, ensure that all the bleach has been washed away. Use a plastic brush or scrub pad as an additional check.
3. Dry the floor thoroughly with a mop making sure it's rid of moisture.

- **Steps:**

1. After you've prepared the floor as instructions above, please ensure you put on the basic gear
2. Pour the chemical into the Spray Bottle or into a wide pan into which you can dip the Roller/Paintbrush for direct application
3. Spray the Chemical with one hand and spread it uniformly using the roller or paintbrush over the floor with the other. In case you don't have a spray bottle, apply directly using the Roller or Paintbrush but be careful about wastage
4. Ensure you keep agitating the chemical lightly with the brush every few minutes - do not let it dry or pool between the tiles for the entire period of 12-15 minutes from initial application. This is necessary for it form a strong bond with the floor as a critical action
5. Repeat steps for the rest of the floor sections
6. Once done, wash the entire floor thoroughly with cold water lightly using the scrub pad or a brush with soft brush to remove the excess chemical

Note: Hard, dense surfaces or glazed tiles may require additional applications to produce desired level of slip resistance.

REMEMBER

- The cleaner the floor is kept, the more effective will be the anti-slip treatment
- Never use a mop to clean any floor treated with this solution. Instead a Brush with Plastic Bristles should be used to clean and washed off with cold water

- Use Oxon Sure Grip Floor Cleaner cum Booster (launching soon) regularly to keep the micro-pores free from buildup of dirt and grease once a month This is also necessary for the warranty to be valid
- Some patches of white residue efflorescence may appear on the floor. This is normal and usually takes a few weeks of regular cleaning and maintenance to disappear

P.S.: This product improves the grip quality of wet floors drastically but cannot ensure falls will not occur. Please be careful and take precautions while walking on any wet surface
