

How to Use?

- Check the diameter of the tool shaft is within 40 mm
- Loosen the screw on both Jubilee Clips below the handle
- Slip the handle onto the Shaft
- Identify a comfortable position at which to fit the handle
- Tighten the screws by hands and you are ready for action
- In case you need to use both hands, use another add-on handle fitted perpendicularly to the first one for improved motion
- Once done, remove the handle(s), clean them well and store them in a cool and dry place
- We do not recommend using them on tools used to hammer and/or break materials - this might damage the clips
