

How to Use?

- Identify your working table and required angle of viewing/cutting
- Slide the sheet(s) between the transparent inner cup and blue outer cup
- Rotate the paper across the cups together to identify the best possible viewing angle with the paper facing you - High, Medium and Low
- Tighten the blue hand knob slightly to hold the papers in place
- If you would be seated under a fan or outdoors in windy conditions, you might need to pair it with a Hands Free Desk Clamp or a paper weight. It will also come handy while reading a newspaper to ensure balance.
 - Simply fit the paper into the document holder first and fit the Desk Clamp over the metal panel. Alternately, a paper weight can be placed on the metal panel, but it might not be as effective.

REMEMBER

- This unit is not made to carry weight or exert pressure - so please do not use it for these purposes.
- Do not over stress the cups by tightening the knob excessively

- It can be cleaned with a damp cloth. Should not be washed with soap or abrasive liquids
