FinalCut[™] Cord and Wire Auto Glass Cutting System

Our customers have sent us their wish list and we've listened. GT Tools[®] is excited to introduce the FinalCut[™] to the GT line of professional grade auto glass wire and cord cutting systems. This tools small profile and foot print fits into tight spaces for tough quarter glass cuts, but was over engineered to withstand the daily abuse of windshield cut outs as well.

Small Footprint

The FinalCut[™] uses a 6 inch curved rubber vacuum pump cup for use in tight areas. Ideal for quarter, back and windshield cutting.

Hardened Stainless Steel Components

In addition, the FinalCut[™] is also engineered using 304 stainless steel for the spool and pulley components. These hardened parts are designed to accept wire or cord cutting materials: a first for the industry.

Precision Machined

The FinalCut[™] tool body is precision machined out of a single block of 6061 billet aluminum with an offset ergonomic design to fit in tight spaces for easy cutting. Made in the USA

Dual-Drive Cutting

The FinalCut[™] along with the ShortCut[™] are the only engineered dual-drive systems on the market, which means they can be operated with our unique swivel drive ratchet or a low revolution/high torque drill; another industry first.

Locking Back Drive

If we haven't exhausted our resources enough, the FinalCut[™] also features a locking back drive that prevents the wire or cord from releasing or slipping under tension during ratchet or drill drive operation.

FinalCut[™] Winding **Assembly Only** AGWCR2 \$550

System Contents

FinalCut[™] Winding Assembly, GT Tools 3/8" Swivel Ratchet. GT Tools 3/8" Socket. T-Handle, Small Guide Shield, Gorilla Cord 250ft. ZipLine 300ft. RZR Wire 200ft, Anchor Stop, Case, Product Manual
