

Diamond BluWave™ UV LED Curing System

BW
\$275

Introducing another industry first, GT Tools® is proud to produce the first and only integrated UV LED windshield repair curing system. This advanced technology promotes a stronger, faster cure with all resins. With the BluWave's™ high intensity and lightning-fast UV LED, GT Tools® has changed the standard for windshield repair.

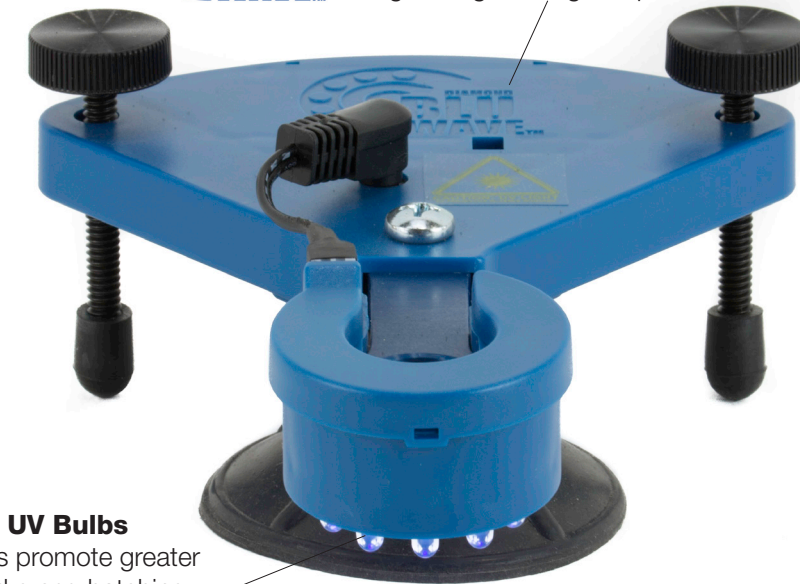

High Intensity UV Bulbs

These LED bulbs promote greater cross-linking and cross-hatching in the resin curing process for a stronger, more durable cure.

The Only Fully Self-Contained UV-Curing System Available
The BluWave™ system utilizes an integrated lithium-ion battery for long-lasting rechargeable power.

Patented Technology
The BluWave™ can be utilized with GT Tools® Spectrum™ and Maxim™ Windshield Repair Systems.

Charge and Go
The BluWave™ integrated Lithium Ion Battery will last approximately 40-60 repairs before needing to be recharged. 1 hr Charging is as easy as plugging the BluWave™ into an outlet with the included charger.

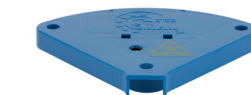

Long-Lasting Power
Our LED technology employs cutting edge durability, with an LED lifespan of over 15,000 repairs.

360° Curing Under Pressure

Fully encircling the injector with a 360° bank of LEDs allows you to cure the repair while the injector pressure is holding the resin in the repair. This prevents the chance of resin pulling back from the ends of the cracks prior to curing.
