

Single or Multi-Player Solitaire (1 - 3 players)

A game for 1 – 3 players

For the *food∞forest*tm playing cards

A fun, non-competitive game about planning your own food forest

Object: Build a landscape where every card's inputs are satisfied by an adjoining card's outputs. This is a non-competitive, puzzle-style game but cooperation is encouraged.

Preparation: Do not use insect or natural disaster cards. Separate house cards. Each player gets 19 total cards: 1 house card + 18 additional cards.

Playing Solitaire: Starting with the house, each player arranges the 19 cards such that:

1. The *N* corner of each card points away from the player.
2. Every card touches at least one other card along a full side or at corners.
3. Cards that require full sun ☀ are not placed in the shade (ie: not on *N* corner, or *NW* or *NE* sides) of cards with the fully shaded *N* symbol. Full sun cards also may not be placed at an *N* corner where the *N* is half shaded: (i.e. do not place a plum card at the northern corner of a chestnut card.)
4. Cards with the full sun | part shade image ☀ | 🌑 are not placed in full shade, i.e. not on a corner where the *N* is fully shaded.
5. A card with “pz:1” (Permaculture Zone 1) must touch a card with “pz:0” or “pz:1”; a card with “pz:2” must touch a card with “pz:0”, “pz:1” or “pz:2” and so forth, so that every card touches at least one card with a “pz” that is less than or equal to its own “pz”. These “zones” build out from the house. You can learn more about Permaculture zones on our website and online.

Conclusion: A player is finished when every input of every card is matched by an adjoining card's output. Share, swap, and discard as much as you like. If it is not possible to solve for every input, do the best you can.
