

!! PRINTING WARNING !!

For accurate size measurement, this document must be printed at 100%. To do this make sure you uncheck the fit to page in your print dialogue box and set up the page scale to 100% or actual size. Use the ruler below (in method N0.1) to check the 100mm line is exact. Please Note: Do not measure on a screen, must be printed. Sizes using this page are considered approximate and may need to be re-adjusted.

Method N0.1 Finger Ring Sizer

01. To make the ring sizer stencil more durable, add a strip of clear tape over the ring sizer stencil.
02. Using a blade, follow the dashed lines to cut out the stencil of the ring sizer and the slit.
03. With letters facing outwards place the ring sizer over the widest point of your chosen finger (usually the knuckle).
04. Insert the end of the ring sizer through the slit. The letter that lines up with the slit will be your ring size.

Note: The size needs to be able to slip over the knuckle. If you are between two sizes choose the larger size.

Method N0.2 Existing Ring Sizer

01. Choose an existing ring from your collection that comfortably fits on the desired finger for your new ring.
02. Using the circles below, move the ring between the circles until you can see the entire circle inside of the ring.

Note: If the size is between two letters, choose the larger size.
