

# There are several ways to find air quality reporting. Here are some common methods:

## AIR QUALITY MONITORING WEBSITES:

**airnow.gov** This United States Environmental Protection Agency website provides real-time air quality data.

**waqi.info** This website provides global air quality information for various cities around the world.

## MOBILE APPS:

**AirVisual**  
**Plume Labs**  
**Breezometer**

## WEATHER WEBSITES AND APPS:

**Weather.com** often displays the air quality index alongside weather forecasts.

## LOCAL NEWS STATIONS:

Local news stations often include air quality reports as part of their weather updates. This information is particularly useful during wildfire seasons or other environmental events.

## SOCIAL MEDIA:

Follow local environmental agencies, meteorologists, or official government accounts on social media platforms. They often share real-time air quality updates.

## SMART HOME DEVICES:

Some smart home devices, like smart thermostats or air purifiers, provide air quality information. Check the accompanying apps or displays for real-time data.
