

Water-free formula sunscreen products! Kari Gran Three Sixty Five SPF 28 is the strongest in history

As a mother, I have always chosen to use physical sunscreen for my two daughters. In addition to the skin of infants and young children, physical sun protection is also the best choice for sensitive skin. The reason is that chemical sunscreens are prone to many different derivative compounds, while physical sunscreens use the principle of reflected light to achieve UV blocking, which is much safer.

I recently met Kari Gran Three Sixty Five SPF 28 365 Sun Protection Lotion, a 365-day physical sunscreen. It uses non-nano-zinc oxide as a physical sunscreen ingredient, combined with antioxidant fruit oil (including non-genetically modified raspberry seed oil, non-genetically modified French plum seed oil, organic Hawaiian nut seed oil, non-genetically modified stone chestnut seed oil), organic avocado oil and organic jojoba oil, can make non-nano-zinc oxide evenly dispersed in the oil component, after application to the skin, because its molecular size is not absorbed by the skin, and it has been experimentally proved that even after 120 After a minute of UV exposure, the ingredients remain stable and do not deteriorate. Because the product uses antioxidant fruit oil instead of water, its anhydrous formula can also eliminate the use of preservatives, and everyone naturally uses it more reassuringly.

I really like the texture of it is soft and easy to be absorbed by the skin, as long as the bottle is gently shaken before use, and then squeezed out like a red bean, enough to spread the skin and neck skin, and then with the foundation, you can also Make the makeup more compliant.

As for the days when I don't wear makeup, I will use it with the newly launched Setting Powder. It uses mica and aloe vera as its main ingredients. It also does not add any chemical and skin-damaging synthetic ingredients (such as talcum powder, spices and dyes). It can be used to make the skin more transparent and the oil control effect is very good. In addition, after applying the foundation, there is no heavy fixing effect.
