At the top is a brown cardboard box with the LASFIT logo. Below it is a black plastic box, also with the LASFIT logo. In front of the boxes is the LED light bar itself. Below the light bar are various accessories: two side mounting brackets, two bottom mounting brackets, several bolts, nuts, washers, and Allen keys.</p>

**Note:** A wiring harness is not included in the package. You can order a wiring harness from Lasfit if needed.

## PRODUCT SPECIFICATION

<b>Brand:</b>	Lasfit
<b>Color:</b>	White, Amber
<b>Size(inch):</b>	12", 22", 32", 42", 52"
<b>Wattage:</b>	12"-30W, 22"-60W, 32"-90W, 42"-120W, 52"-150W
<b>Raw Output(Lumens):</b>	12"-5200LM, 22"-10500LM, 32"-15700LM, 42"-20900LM, 52"-26100LM
<b>Measured Output(Lumens):</b>	12"-3220LM, 22"-6020LM, 32"-8560LM, 42"-11290LM, 52"-14230LM
<b>Beam Pattern:</b>	Spot and Flood Combo Beam
<b>Color Temperature:</b>	6000K (White), 2000K (Amber)
<b>LED Chips:</b>	Osram's OSCONIQ® P 3737 LED
<b>Output Voltage:</b>	9-36V
<b>Waterproof Rating:</b>	IP67
<b>Connector Type:</b>	DT Port
<b>Optical Accessories:</b>	Reflective Bowl
<b>Warranty:</b>	3-Year Hassle-Free Warranty+45 Days Money-Back Guarantee
<b>Material:</b>	6063 Aviation Aluminum; Osram Led Chips; PC Lens.
<b>Install Positions:</b>	12"(Versatile); 22"&32"(Bumper/Grille); 42"&52"(Windshield/Roof).

# PRODUCT DIMENSIONS

## 12"、22"LED Light Bar Dimension

## 32"、42"、52"LED Light Bar Dimension

## KEY FEATURES

### ✓ Superior Brightness Guide You Off The Road

- High luminous efficiency Osram LED chips
- Spot/flood combo beam
- High transmittance PC lens

### ✓ Beginner-Friendly Installation

- Plug and play DT Port connector
- Adjustable mounting bracket to 360°
- Dual options for side and back mount

### ✓ Unique Design Built For Off-Road

- Sleek, low-profile, slim, and single-row design
- Durable die-cast aluminum structure
- IP67 waterproof and dustproof

# INSTALLATION MANUAL

## Step 1. Determine The Mounting Location And Measure The Size.

One way to ensure the best performance of your light bars is to choose the best mounting location for them. Common mounting locations include:

**Bumper Mount:** front bumper/rear bumper

**Grille Mount:** upper grille/lower grille

**Roof Mount:** rooftop/rear roof

**Windshield Mount:** lower windshield/above the windshield

**Note:** The perfect mounting options often depend on your specific vehicle, personal preferences, mounting brackets, technical abilities, and most importantly, the accurate measurement results.

## Step 2. Mounting Brackets With The Provided Hardware.

The light bar comes in two different mounting styles, you can choose to install it from the side or from the back.

Side Mounts

Bottom Mounts

**Note:** Our kits come with universal mounts, Custom Modification might be needed to mount them. We have some Vehicle-specific Brackets for you to choose from, you can check on [lasfit.com](http://lasfit.com).

### Step 3. Connect The Power Cable And Wiring Harness.

- 3.1 Connect the light bar plug to the DT-Port connector included with the harness.
- 3.2 Connect the red wire to the positive supply and the black wire to the negative or common ground.
- 3.4 Pass the wiring harness through the firewall and leave part of the switch segment in the vehicle.
- 3.5 Press the switch to test if the lights are working properly.
- 3.6 Adjust the light to the desired angle and then secure by tightening all mounting screws.

## FAQ

### Q1: What should I do if the light bar does not work after installation?

A: Please follow the below troubleshooting process to find out if it is a quality issue:

**Step 1. Check and make sure positive and negative are properly connected.**

**Step 2. Check and see if the LED light on the switch light up, if no light, check the battery connection and fuse.**

When positive “+” and negative “-“ are connected correctly. The green or red light will be on.

**Step 3. Press the on/off switch you should hear a “click” sound from the relay.**

If you can't hear a “click” sound, the relay has defected. If you can hear a “click” sound from the relay, use a multimeter to check the DT connector.

(Make sure the light is green, which indicates it is ON and sending power to the DT plug )

## Q2: How to get the moisture/water condensation out of the light bar?

A: When you drive on continuous rainy days or trail in extremely inclement weather for a long time, the water vapor in the air may condense into moisture to the interior of the lampshade due to the difference in temperature and humidity outside, so this is normal to see the moisture inside. Please follow the below steps to keep moisture out of the light bar:

Step 1: Please remove the breather hole with a 5/16 wrench behind the light bar.

Step 2: Let the light bar stay on for more than 30 minutes and wait for the condensation to disappear.

Step 3: Then put the exhaust valve screw back before turning off the light bar, that will be fine after finishing.

## OUR GUARANTEES

**45 Days Money-Back  
Return/Exchange**

**3 Year Hassle  
Free Warranty**

**Free  
Shipping**
