

# **GROWLERWERKS APPROVED CO2 CARTRIDGES**

The uKeg is a pressurized container that keeps the beverage within fresh and carbonated, dispensing it through an integrated tap faucet. The CO2 source for the uKeg is provided by a device referred to as a "Cartridge". These Cartridges are also known as Chargers, Soda Chargers, CO2 Chargers, CO2 Cartridges, or simply CO2.

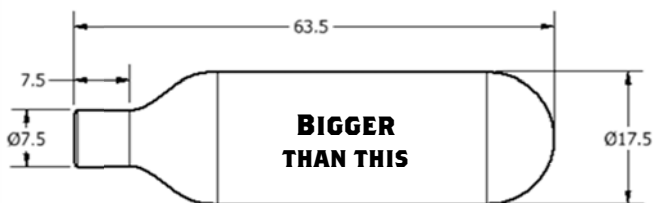

GrowlerWerks approves the use of GrowlerWerks brand Cartridges which are tested to be of the highest quality and the uKeg is designed to work with the specific size of these Cartridges. These can be purchased directly from the GrowlerWerks website or from other approved retailers. If the GrowlerWerks brand is not available, a number of other Cartridges brands are known to be compatible with the uKeg, including Whip-It Brand. GrowlerWerks does not guarantee that these brands will work with the uKeg as the specifications of the Cartridges for those brands may change over time and any damage caused by a non-GrowlerWerks brand will void the warranty.

GrowlerWerks will extend the warranty to cover use with a non-GrowlerWerks brand of CO2 Cartridge provided that the Cartridge meets the following specifications:

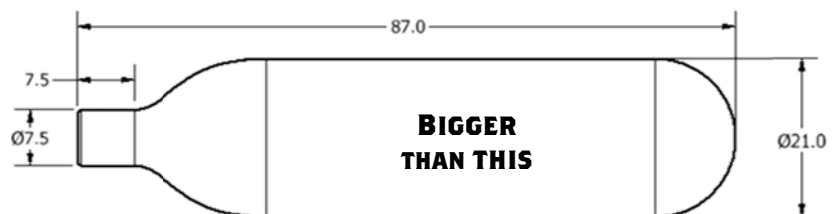

1. Contains 8 or 16 grams of CO2, depending on Cartridge size
2. Designated "Food Grade"
3. Uses an unthreaded connection port
4. Has a protective coating for use in damp environments
5. Is compliant with the Size Reference provided below

## **SIZE REFERENCE (DRAWINGS ARE 1 TO 1 SCALE):**

**8 GRAM**

**16 GRAM**
