Instructions:

Step 1: Install Axia clamp ring around the cage. (Reference Picture 1)

Step 2: Place the body of the Axia clamp through the opening of the clamp ring and install the provided nut and bolt that come with Axia clamp. KEEP CLAMP LOOSE FOR ADJUSTMENT. (Reference Picture 2)

Step 3: Remove bottom nut from the body of the Axia clamp and install the cage pod over the threads by securing it with the Axia clamp nut. (Reference Picture 3 & 4)

Step 4: Feed speaker wire through the cage pod. (Reference Picture 4)

Step 5: Connect speaker wire to the speaker. (Red wire is positive, black ground wire is negative)

Step 6: Mount speaker to speaker pod with the 6 screws provided with the speaker. (Reference Picture 5)

Step 7: Feed speaker wire through the cage. If you have a factory cage there is a hole to feed the wire through. (Reference Arrow of Picture 6) If you have an after-market cage, you will need to drill a hole using a 9/64ths drill bit. Mark and drill hole on the side of the cage where the speaker wire comes out of the speaker pod.

Step 8: Move up to the front of the vehicle and drill a hole for wires to feed out of the cage. Use a 9/64ths drill bit and make sure the hole is below the level of the plastics. (Reference Picture 7)

Step 9: Feed speaker wire through the hole you've just drilled and connect speaker wire to amplifier.
