

- 1 The pumping procedure is efficient and easy due to a smooth power transfer system via a double push rod.
- 2 The pump system incorporates an effective mixing system. While pumping, the liquid in the tank is constantly swirled and mixed.
- 3 The tank and the base are anatomically shaped similar to the human spine. In conjunction with comfortable shoulder straps, the ease of carrying the unit is significantly increased. This is a huge advantage for operational comfort and safety.
- 4 An integrated and robust handle assists with comfortable transport and easy emptying.
- 5 The internal, large volume pump system is centrally located and sealed with a low wear pleated hose. This arrangement prevents potential leakages and reduces maintenance.
- 6 The diameter of the large tank filling aperture is 124 mm with a quick locking lid. The large inlet filter is easily removed.
- 7 A stable tank base ensures good footing, also on uneven surfaces.
- 8 Pump lever suitable for LH/ RH operation with position for transport /storage

The uncomplicated design of the new Backpack Sprayer SOLO Nova 424 presents a reliable, practical and comfortable product.

The sprayer fulfils the basic requirements for demanding use in the trade and with semi-professional operators. For the intensive use in the plant protection industry. Suitable for the application of all approved plant protection chemicals. Robust and maintenance friendly design.

MODEL	424
Capacity l (nominal volume)	16
Max. spray pressure bar	4.0
Dry weight kg	5.1
Hose length m	1.3m
Spray wand	Plastic, 50 cm
Pump type	Internal piston pump
Equipment	Adjustable universal hollow cone nozzle
