

Philmac Metric Tapping Saddles.

The Philmac Metric Tapping Saddle is a fitting engineered for use above or below ground for the transfer of fluids; including water, chemicals or slurries, frequently encountered in the utilities, mining or irrigation industries.

Features

- PN16 pressure rating. Complies to draft specification AS 4129, "Fittings for PE Pipes for pressure applications".
- Nitrile sealing gasket for excellent sealing performance and chemical resistance.
- Suitable for contact with potable water – complied with AS3855 and AS40210 (int).
- High grade polypropylene body selected for its tough, high impact, lightweight, and durable properties.
- Stainless steel reinforcing rings on threaded branch.
- Bolt clips to facilitate easy assembly.
- Bolt hole guides to assist bolt insertion.
- Hexagon moulding to prevent bolt turning during assembly.
- Supplied with either Class 316 Stainless Steel or Zinc electroplated steel nuts and bolts.

Parts and material

No.	Description	Material	Quantity
1	Reinforcing ring	Stainless steel 304	1
2	Sealing gasket	Nitrile rubber	1
3	Body	Polypropylene	1
4	Nut	Zinc electroplated steel or stainless steel 316	4 (2 for 25 and 32mm)
5	Bolt	Zinc electroplated steel or stainless steel 316	4 (2 for 25 and 32mm)

Dimensions

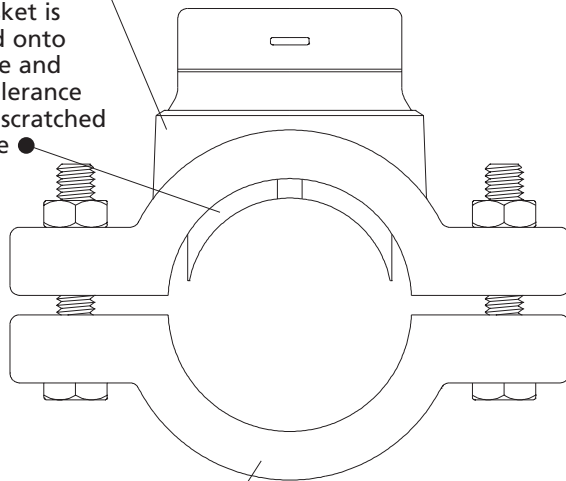

Saddle size (mm)	Hexagon nuts	Bolt Dimensions (mm)	Dimension A (mm)	Dimension B (mm)
25	M8	M8 x 45	82	54
32	M8	M8 x 45	92	66
40	M8	M8 x 45	96	67
50	M8	M8 x 45	115	80
63	M8	M8 x 55	126	89
75	M10	M10 x 65	141	99
90	M10	M10 x 65	160	104
110	M10	M10 x 65	181	108

O P E R A T I O N

Robust saddle tower design for long term stress

Sealing gasket is compressed onto pipe surface and provides tolerance to scuffed, scratched or oval pipe

Rounded body shape prevents unnecessary stress on body during assembly

Reinforcing ribs strengthen pressure performance

Stainless steel reinforcement ring provides superior support to female off-take thread

Clips prevent bolt from displacing during assembly

Hexagonal groove prevents bolts from turning when tightening nut

I N S T A L L A T I O N

Use

Can be used to fit a wide range of pipes from PN6.3 to PN16 including MDPE, HDPE, PP or ABS that have metric external diameter dimensions.

Pre Assembly

Select branch off-take position, clean pipe, ensure easy access and mark hole. Place saddle upper body and align outlet branch with marked hole.

Assembly

Place saddle lower body over pipe. Ensure thread of bolts are clean before placing in saddle. Tighten all bolts alternately around saddle. ensure saddle off-take hole stays in alignment with marked hole.

Drill suitable sized hole through orifice of saddle with boring tool. Ensure that the threads and gasket are not damaged.

Disassembly

Loosen and detach all bolts around saddle.

Note:

1. Philmac recommends the use of PTFE tape on BSP threads to ensure a positive seal.
2. Philmac uses 316 high class Stainless Steel nuts and bolts. Inherent in the nature of all Stainless Steel nuts and bolts is that they can fuse following installation. Lubrication of threads before installation may help to prevent this occurring.
