Place heel **HERE**

First things first

A | Print out this sheet

Go to print options and make sure "fit to page" is not selected. Make sure the scale is 100% and print on an 8.5" x 11" sheet of paper.

B | Check the scale

Place a bank card on this rectangle. It should line up exactly with the edges.

Let the fun begin!

C | Prepare the sheet

Fold the sheet along the dotted line and place the fold next to a wall.

D | Call your child over

Place your child's foot in the middle of the semi circle, with their heel flush against the wall. They should be standing up straight with their feet parallel, like a soldier! Make sure their weight is equally distributed on both feet.

E | Grab a pencil

Trace around the big toe, trying not to tickle your child too much.

F | Repeat and finish

Follow the same steps to measure your child's other foot and take **the larger of the two measurements**.

You kid's feet can grow half a shoe size every three months, so remember to measure their feet regularly!
