

THE IMPLEMENT RANGE – PASTURE TOPPERS & FINISHING MOWERS

Pasture Toppers

Pasture toppers are ideal for cutting through rough grass, rushes and reeds. The toppers have 2 large heavy-duty cutting blades under the machine which have the facility to fold back if it hits a solid object, i.e. stone or stump. The advantages of this are that there is less horsepower needed to start the topper up, better protection for the mower and tractor and less frequent need to change shear bolts, thus giving the mower a long and reliable working life.

Toppers are protected by a shear bolt as standard. For use with smaller tractors an overrun clutch needs to be fitted to the PTO shaft to protect the tractor's gearbox.

Finishing Mowers

Rotary Finishing Mowers have the capability to top grassland as well as to mow lawns. Using multiple blades has the advantage of giving a much greater efficiency of cut. Three Blades also leave a cleaner finish and minimize the amount of material left behind.

The cutting height is adjustable from 1" to 4" and is controlled by adjusting spacers on the four supporting castor wheels.

Model	Working Width	Overall Width	HP	Weight (kg)	No. of Blades	Price
DM 120	120 cm	126 cm	14-40	182	3+3	
DM 150	150 cm	156 cm	25-40	195	3+3	
DM 180	180 cm	186 cm	25-40	287	3+3
