# SLOTHS

Sloths are one of the top slowest creatures on land. They spend most of their time hanging upside-down on a tree trunk or sleeping.

There are 6 types of species:

- maned
- Linn's
- pale-throated
- brown-throated
- pygmy
- Hoffmann's

Sloths are even slower when they are on the ground.

---

They have a species called Algae that is green to help camouflage in the leaves away from predators.

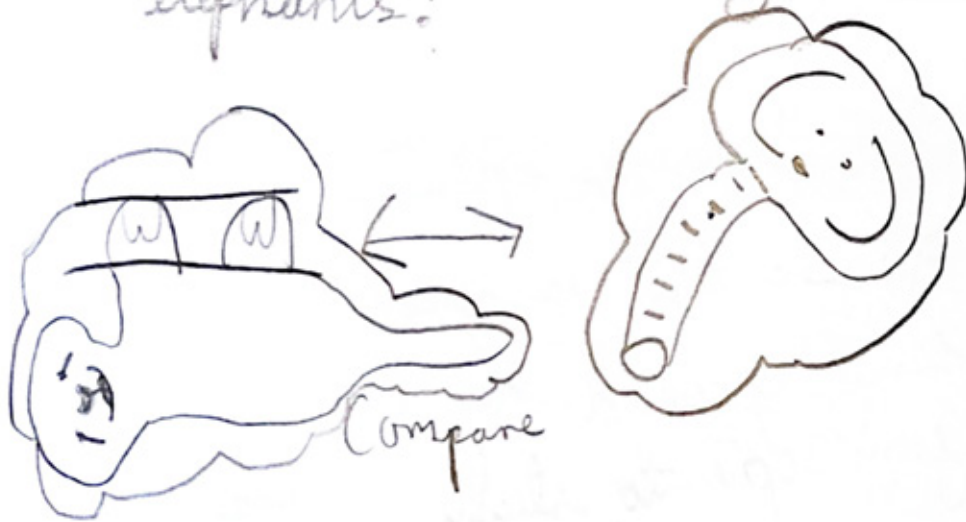

Algae is in Sloths fur.

Sloths are even slower when they are on the ground.

They have a species called Algae that is green to help camouflage in the leaves away from predators.

There used to be 7 species of sloths but the Super-sloths are extinct. Super-sloths were as big as elephants!

They are known for their super slow lifestyle. You can find them in the forest canopy in South and Central America!

It takes years to teach sloths the routine and skills they need to be able to live in the forest and wild.

## Trull's help

Trull moved to Costa Rica in 2007 to study primates like monkeys. Instead she fell in love with sloths. She helped sloths who were badly injured by electric wires or attacked by other animals.
