MTN Chain Sliders

The **MTN CS** is an ergonomically-designed chain slider for use with most brands of electric chain hoists, including the CM Lodestar and Prostar.

Its revolutionary interchangeable insert system allows all standard chain sizes to fit precisely.

With this novel feature, carrying and tracking multiples sizes of chain sliders are no longer needed. Only one set of **MTN Chain Slider** can be used for a variety of chains, cable wire ropes or synthetic lines used in hoisting devices, giving you a true all-in-one solution.

Sizes of inserts:

Yellow: 7.94mm _____

Blue: 6.35mm _____

Red: 3.99mm _____

Low Friction HDPE Material:

- Allowing for the sliders to freely rotate while stacking resulting in neatly coiled cables every time you rig

No tools required for installation or removal

- Minimizing the difficult and hazardous situations, e.g. installing or removing chain sliders from significant heights above a stage

Cost-Saving:

- Interchangeable inserts dramatically reduce cost and redundancy in your fleet

Universal:

- Works with all brands of electric chain hoists or chain motors
- Can also be used without inserts
