

Cosmetic dentistry to enhance your smile

According to a survey by the British Academy of Cosmetic Dentistry (BACD), although there is a strong interest in cosmetic dentistry, people are held back because they don't know about the treatments that are available, or feel they are would cost too much.

When they find out more, many patients are surprised at how easy and affordable it can be to have their smile enhanced.

Cosmetic dental treatments such as tooth whitening and tooth-coloured fillings are popular, and can make a big difference for a relatively small cost.

Bonding can hide many small imperfections such as chips, cracks and gaps. This treatment is painless and inexpensive.

Modern materials mean that crowns and replacements for missing teeth are extremely natural looking, perfectly complimenting your other teeth.

Advanced treatments are likely to be more expensive, but the long-term benefits are often well-worth it. For example dental implants are strong, lasting and extremely realistic replacements for missing teeth. They can enable you to eat and speak with confidence.
