Excellence in manufacturing!

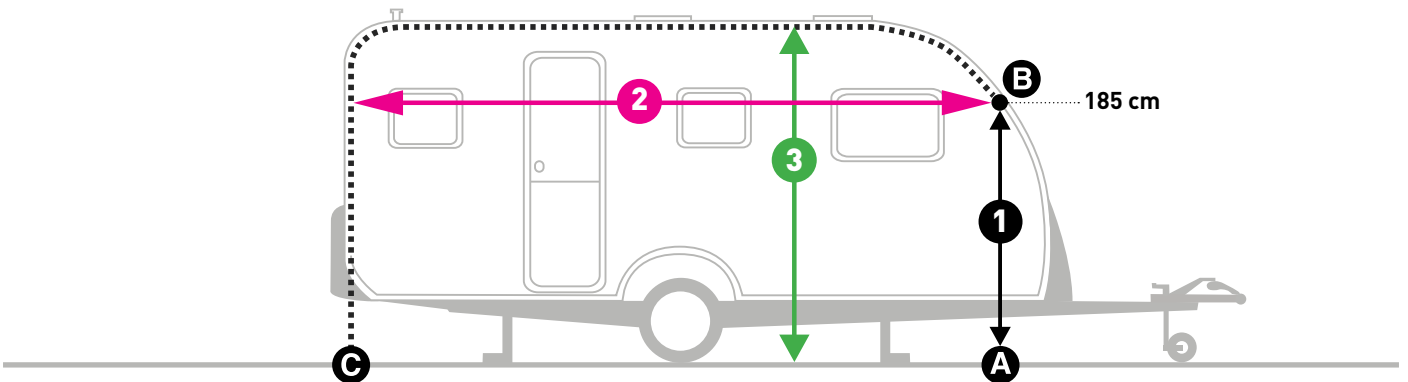

How to measure your caravan to get the right Walker size:

- 1** - First put your caravan on flat ground.
 - Start measuring at point A and go 185 cm's straight up to the awning rail to point B.
 - Continue measuring from point B to point C.
 - The complete length from point A to B and C is the exact A-size of your caravan. Check the Walker size chart which size suits your caravan best.

- 2** Start measuring the width of the caravan on height 185 cm; the distance from point B horizontally (NOT through the awning rail) through to the back of the trailer at a height of 185 cm.

- 3** Measure the height of the awning rail from the ground.

1	(A+B+C) = _____	cm
2	= _____	cm
3	= _____	cm

For pop-up caravans:

- 4** Also measure the length of the 'straight' track, so measure the rail from the end of the curve to the beginning of the curve

4	= _____	cm
