

Thank you for your purchase of our led lighting kit.

Warning: This kit is for off road use only. Please check your state and local laws before installing this Interior Lighting Kit. Every state has different policies and procedures in place regarding aftermarket LED lighting accessories. We are not responsible for any fines that you may receive while using this lighting kit.

Warning: The installation of this kit is recommended to be installed by a licensed professional. The improper installation of this kit will void all warranties.

The control box must be installed in a dry location! Having this part exposed to water or the elements will cause the kit to fail. Any water damage or corrosion to this part will void all warranties.

Interior LED Light Kit Installation:

1. **Warning:** Do not turn on or connect power to the control box until all of the cables and strips/pods are properly connected.
2. Arrange the strips/pods the way you plan to install them in the interior of the vehicle and test the kit to ensure it is functioning properly before installing.
3. Each interior strip/pod can be mounted virtually anywhere in the vehicle. Our recommended locations are under the dashboard facing the footwell area, under the driver and passenger seats facing the footwell area, under the back of the driver and passenger seats facing the back seats or even in the trunk.
4. Optional: Remove any trim pieces from the interior of the vehicle that may hinder the installation of the interior strips/pods. Starting with the front strips/pods, mount them with plenty of clearance from any moving part such as the steering shaft and pedals. You can use the included 3M™Tape to secure the strips/pods in place or you can use zip ties. Repeat this step with the remaining strips/pods.
5. The kit was designed using a modular locking plug system for connecting the lighting strips/pods to the control box by using the included wire harness. Start plugging the male connections from the strips/pods and control box into the female connections of the harness. **DO NOT SHORTEN OR CUT ANY WIRES, THIS WILL VOID THE WARRANTY.**
6. Each strip/pod daisy chains to the next in the sequence for a quick and easy connection. You do not need to link back to the control box. Make sure the cables are not close to the seat tracks or anything else that may potentially cut or pinch the cables. Secure any excess wiring using zip ties.
7. Find a safe, secure and dry location to mount the control box. We recommend mounting the control box in your center console, under the seat, under the dashboard or in your glove box.
8. You can power this kit by running the power and ground wires directly to the battery. If you are running the power and ground wires to the battery and going through the firewall or any other metal parts, you must protect the wires by using an existing grommet or by drilling a new hole in the firewall and adding a new grommet. If you need to extend the wires, be sure to use 16 or 18 gauge automotive grade wiring and re-install a fuse within 6 inches of the power source. (Fuse not

included if you extend the wires.) The red power wire connects to the positive (+) terminal and the black ground wire connects to the negative (-) terminal of the battery. **Note:** The extra black wire is the antenna wire if you choose to use the sound feature. This wire will not connect to anything

9. If you removed any interior trim pieces for the installation, you can now reinstall those pieces and test the functionality of the kit once more.

Troubleshooting:

If the kit or lights do not appear to operate, first check the installed inline mini fuse. If the fuse is blown, check the wires on the entire kit to ensure they are not cut, pinched, or scorched. If there is no damage to any of the wires and no water damage is visible to the control box, replace the fuse and test the kit again. If the inline fuse is intact, clean both the positive and negative terminals of the battery. Corrosion to the battery terminals can cause a poor connection or simulate being disconnected.

ALL OF OUR KITS HAVE A LIFETIME WARRANTY

Please contact us if you have any issues or questions, and be sure to check out our Ebay Store for accessories, add-on kits, and replacement parts. We enjoy seeing pics of our products, since we do not do installs yet. All customer pics are much appreciated, if you could email us any, and if yours are chosen to be used for our ads, we will give you 25% off on your next purchase. We appreciate your business
