THE EDGEBANDING COMPANY

tece presentation box

The Complete Stock Collection of TECE.

In the beginning of 2019, we completed the most comprehensive edgbanding range that TECE ever manufactured. With this presentation box, we present the PVC, ABS, melamine, veneer and the other products that we produce. With the design of the box, and the preparation of the color swatches, we wanted to show you how much we care about details and what TECE is capable of.

for kronospan colors *EXPRESS* COLLECTION

For Kronospan Colors

The express collection for Kronospan colors is available in 0.45mm, 1mm and 2mm. The collection includes more than 150 colors and it is made of the colors from the latest global collection. Our customers are now able to order as less as two boxes in each color in any width that they require.

foreggercolors

150 Colors from Egger Range

At TECE, we work hard to meet the demands of the market. To this end, we are now offering stock program for Egger colors. With more than 150 colors to choose from, the Egger Express range is now available with as less quantity as 2 boxes in thickness of 0,45mm, 1mm and 2mm and the width can change based on the desire of our customers.

3in1 edgebanding

A special PMMA product

We call this product 3in1 because the edgebanding can consist of 3 different colors or designs. Though we only implement two color products, but it is possible to do it in 3 colors also. Get in touch with us to see what we can do for you.

Endless possibilities in furniture design...

Edgebanding is perceived as an indispensable part of furniture production. Designers often play around with colors of panels, designs of handles. Yet, probably, they don't think of adding a special edgebanding that would change their concept radically. Our 3in1 edgebanding, made with PMMA resins, might be the exact product that the designers might use.

3in1 Marble Design

With our 3in1 product, the furniture producer can have the exact color on sides and in the middle, they can have a different color of marble.

3in1 Metallic Design

The last 5 years have seen much of 2in1 in metallic colors. We now offer the same product in 3in1.

3in1 Wooden Design

We are able to match the edgebanding to boards from any chipboard producer.

3in1 Crosswood Effect

Think of a kitchen which is in anthracite color, a little of wood would make the kitchen look so elegant and stylish.

THE EDGE BANDING
COMPANY

doublelayeredgebanding

Add a Different Look to Furniture

Designers work hard to come up with small details that can make a difference in the final design of their furniture. With our special edgebanding production, we offer many items. Double-layer edgebanding is a new addition to this range. Double-layer edgebanding is produced by co-extruding two layers of plastic together. Colors of both layers can change based on the requirement of the customer.

slitting machine

A Revolutionary Invention

The idea behind this project is to enable our customers, distributors to be flexible in their stock and edgbanding services. With this revolutionary and easy-to-use machine, our customers can slit rolls to any width from 9mm to 90mm in few minutes. The machine is supplied only to our exclusive distributors who buy the edgbanding from us.

At Tece, a lot of new things are being developed...

R&D is an important department at TECE. It is crucial for achieving future growth and maintaining a relevant product in the market. We are already working on our new products: Polypropylene Edgebanding and Edgebanding for Zero-Glue-Joint (for use of laser machines). In 2018, TECE was awarded and accredited to be R&D center by the Scientific and Technological Research Council of Turkey.

other developments

SAP at TECE

Keeping our flexibility in place, SAP was implemented at every department of TECE in the last quarter of 2018. We believe that with this investment, we are now more up to date and effective towards all our stakeholders.
