The Ozone Difference

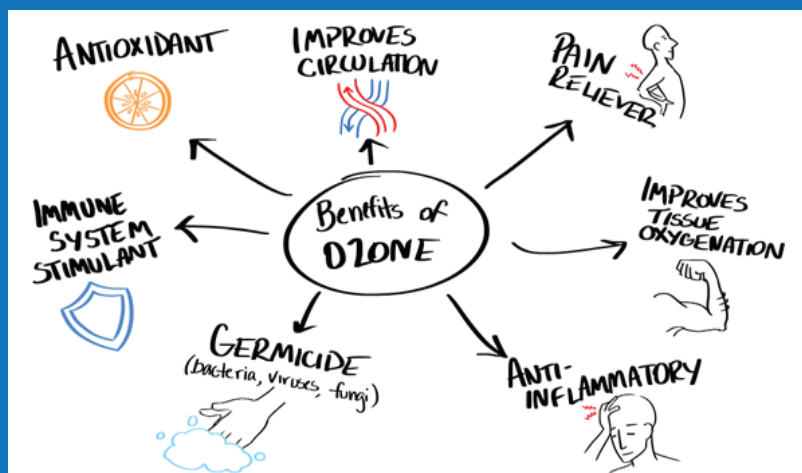

The most modern advancements in cellular healing always includes enhancing the levels of oxygen in the body. Most of us that look to our lifestyle to try to elevate the absorption and assimilation of oxygen through activity, exercise and dietary commitments. Research has shown us that most infectious disease will not thrive in a highly oxygenated internal environment. There is a defined relationship between blood circulation and the ability of the blood and tissues to absorb and retain oxygen. The body uses all the available oxygen to nourish the tissues and organs and cells and to

super charge the natural immune response. In the body's immune defense, hydrogen peroxide is produced and released by T-cells to destroy invading bacteria, viruses and fungi. Blood platelets release hydrogen peroxide on encountering particulates in blood. Hydrogen peroxide is formed in the body by micro-bodies called peroxisomes, which combine water with free oxygen, when sufficient oxygen is available. It is essential to supply the body with free oxygen.

Oxygen-starved cells are unable to produce enough enzymes to fortify their cell wall and are thus more vulnerable to invasion by the always-present viruses. Disease microbes have no enzyme coating. When ozone (extra oxygen) is introduced into the area, it attacks microbes without a coating and diseased cells with deficient cell wall enzymes. It oxidizes them, allowing them to be cleared from the body as part of normal detoxification.

Enhanced Cellular Oxygenation is Essential

Therasage the nation's leader in integrated infrared technology, offers a range of products and applications that are natural solutions for those of us that are challenged with improving the bodies natural ability to absorb oxygen.

Infrared Sauna for full body treatment, opens pores, clears blocked sweat glands, improves circulation, burns calories, enhanced metabolism, best natural detox, increase oxygen upload, stress relief and relaxation, increased nutritional absorption, infused negative ions.

Infrared Protocols

- *Infrared Sauna - use daily for a minimum of 30-45 minutes at 120-125 F Then increase to desired temperature.
- *If your challenge is to improve a chronic condition or detoxify for heavy metals, then an accessory infrared portable heater will enhance cabin temperature by as much as 20 degrees F.
- *Add external ozone device to supplement the Oxygen to enhance absorption.
- *Hydration - Drink 8-16 ounces of water before and after each sauna session - once a week add a few drops of trace minerals to your water supply.
