Luminor

13-Free Smart
Nail Polish System

Helios

Helios Luminor is a 13-free, smart nail polish with a photo-initiator for a gel-like look and long wear time. This formula cures in natural light, with no need for a UV or LED lamp.

Combine it with Helios Luminor Top Coat for extra shine and a maximum wear time of up to 10 days!

13-Free: 9-free (Formaldehyde, Toluene, Camphor, Formaldehyde Resin, Ethyl Tosylamide, Xylene, Rosin, TPHP (Triphenyl Phosphate) & Triclosan), Paraben-Free, Phthalate-Free, Cruelty-Free, and Vegan.

Step by Step

Before Application

Clean
- Wash the client's hands thoroughly and dry them with a towel.
- Use an antiseptic agent on the client's hands to eliminate any risk of infection.
- Remove any nail polish.

Form & Shape
- Create a nail form and, if necessary, shorten the length of the natural nail using Helios' **Aphrodite 180/180 Nail File.**
- Use the Pusher to push back the cuticle and remove all nonliving tissue.

Nail Preparation
- Cleanse the surface with a pad soaked in oil-free nail polish remover or pure acetone to remove moisture and grease from the nail plate. It is important to remove dust, grease, and moisture in order to achieve maximum wear time for the new manicure. Do not touch nails with fingers.

Application

- Apply one thin coat of **Luminor Color** to natural nails. Seal the tip of the nails and let dry for 2 minutes.
- Apply a second coat of **Luminor Color** and let dry for 2 minutes.
- Apply a thin layer of **Luminor Top Coat** and let dry completely. **Luminor Top Coat** will harden over time in natural light.

TIP

- For even longer wear time and quicker dry time, cure **Luminor Top Coat** in an LED lamp for 30 seconds.

Removal

- Use nail polish remover and a cotton pad to remove **Luminor Nail Polish** from nails in the usual manner.
